Operators Address

Building a more valuable Wi-Fi for consumers

Network X / Wireless Global Congress
25th October 2023

Rida ZOUAOUI

What does
Wi-Fi mean
for
European
consumers?

Consumers have a basic understanding of Wi-Fi ...
... and that's OK!

...a **wireless network**

“Wi-Fi is ...”

...wireless internet **access**

...a **service** delivered by a telecom provider

...a **signal connecting devices** which allows you to move
around freely

Consumers' attachment for Wi-Fi is real

Consumers **rely on home Wi-Fi for every aspect of their life**: work, leisure, house chores, security etc.

Due to this strong reliance on Wi-Fi at home, it is an **emotionally charged relationship** 

The consequences of loss of Wi-Fi extends further than the home.

Easy set-up for home users is important and still requires some improvements

Required connectivity thanks to **speed, coverage, and stability**

Need for
Green Wi-Fi
&
Can Wi-Fi play
a role for more
sustainability?

Wi-Fi power consumption

3,65 kWh / year

87,6 kWh / year

Emissions related to the energy consumption of boxes are 24 times higher than that of mobiles

Wi-Fi power consumption is 40% of CPE, but Wi-Fi is always ON with full performances

Wi-Fi and Sustainability

Power saving functions

Mobile offload

Life-cycle of current and
future Wi-Fi generations

Merci

Ryan Granchalek

Sr. Director and GM, Intel Corporation

Wireless Innovation at a Torrid Pace – A Giant Leap for PC Clients

Fighting to improve PC Wireless User Experience for 20 Years...

Agenda

- Importance of Wi-Fi
- Intel® Wi-Fi 7 Update
- Intel Innovations & Industry Collaboration

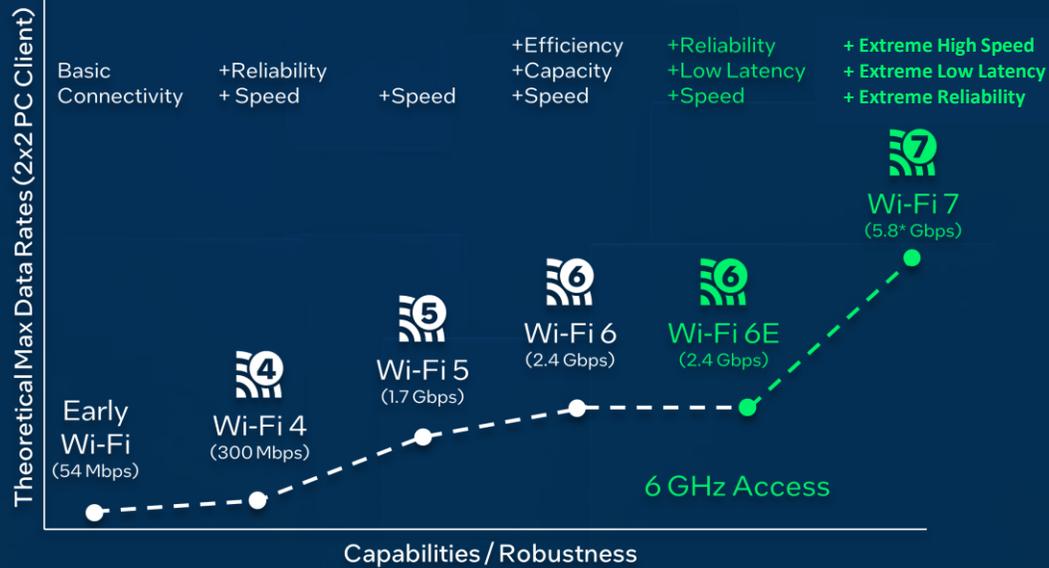

Great Wi-Fi Performance is a Top Priority!

- “Bad Wi-Fi” is in the top 3¹ complaints for remote workers

- “Optimized Wi-Fi” is a top 5² feature for new laptop purchase

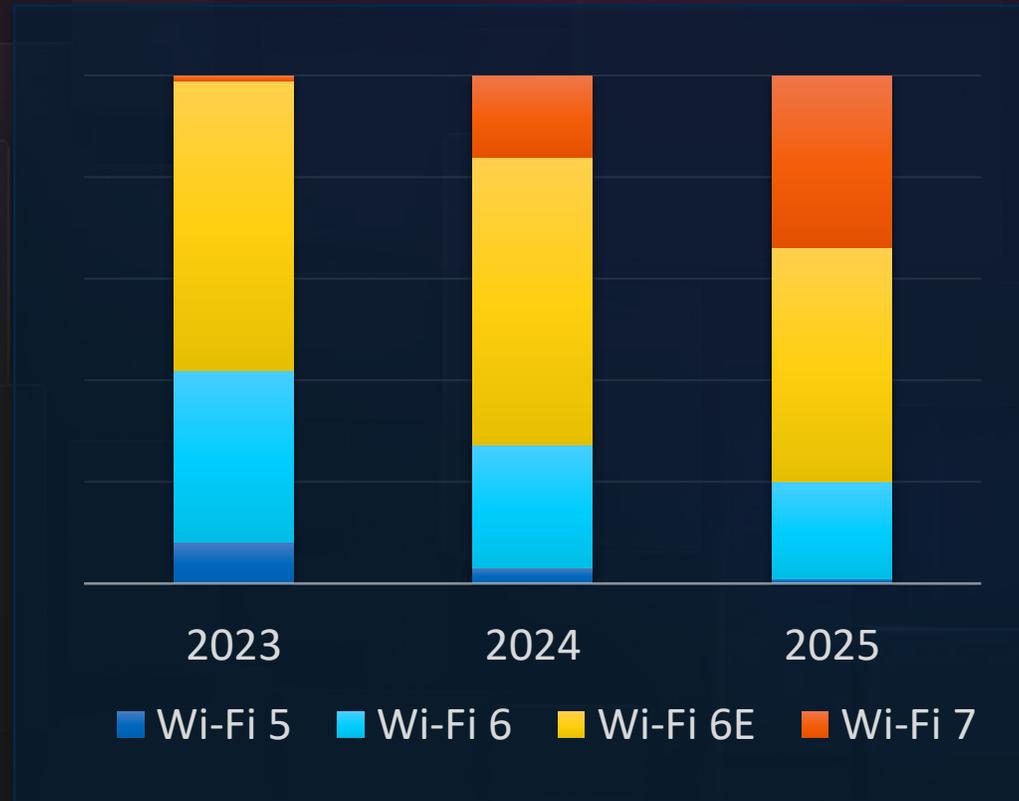

Wi-Fi Standards & Technologies Are Rapidly Evolving

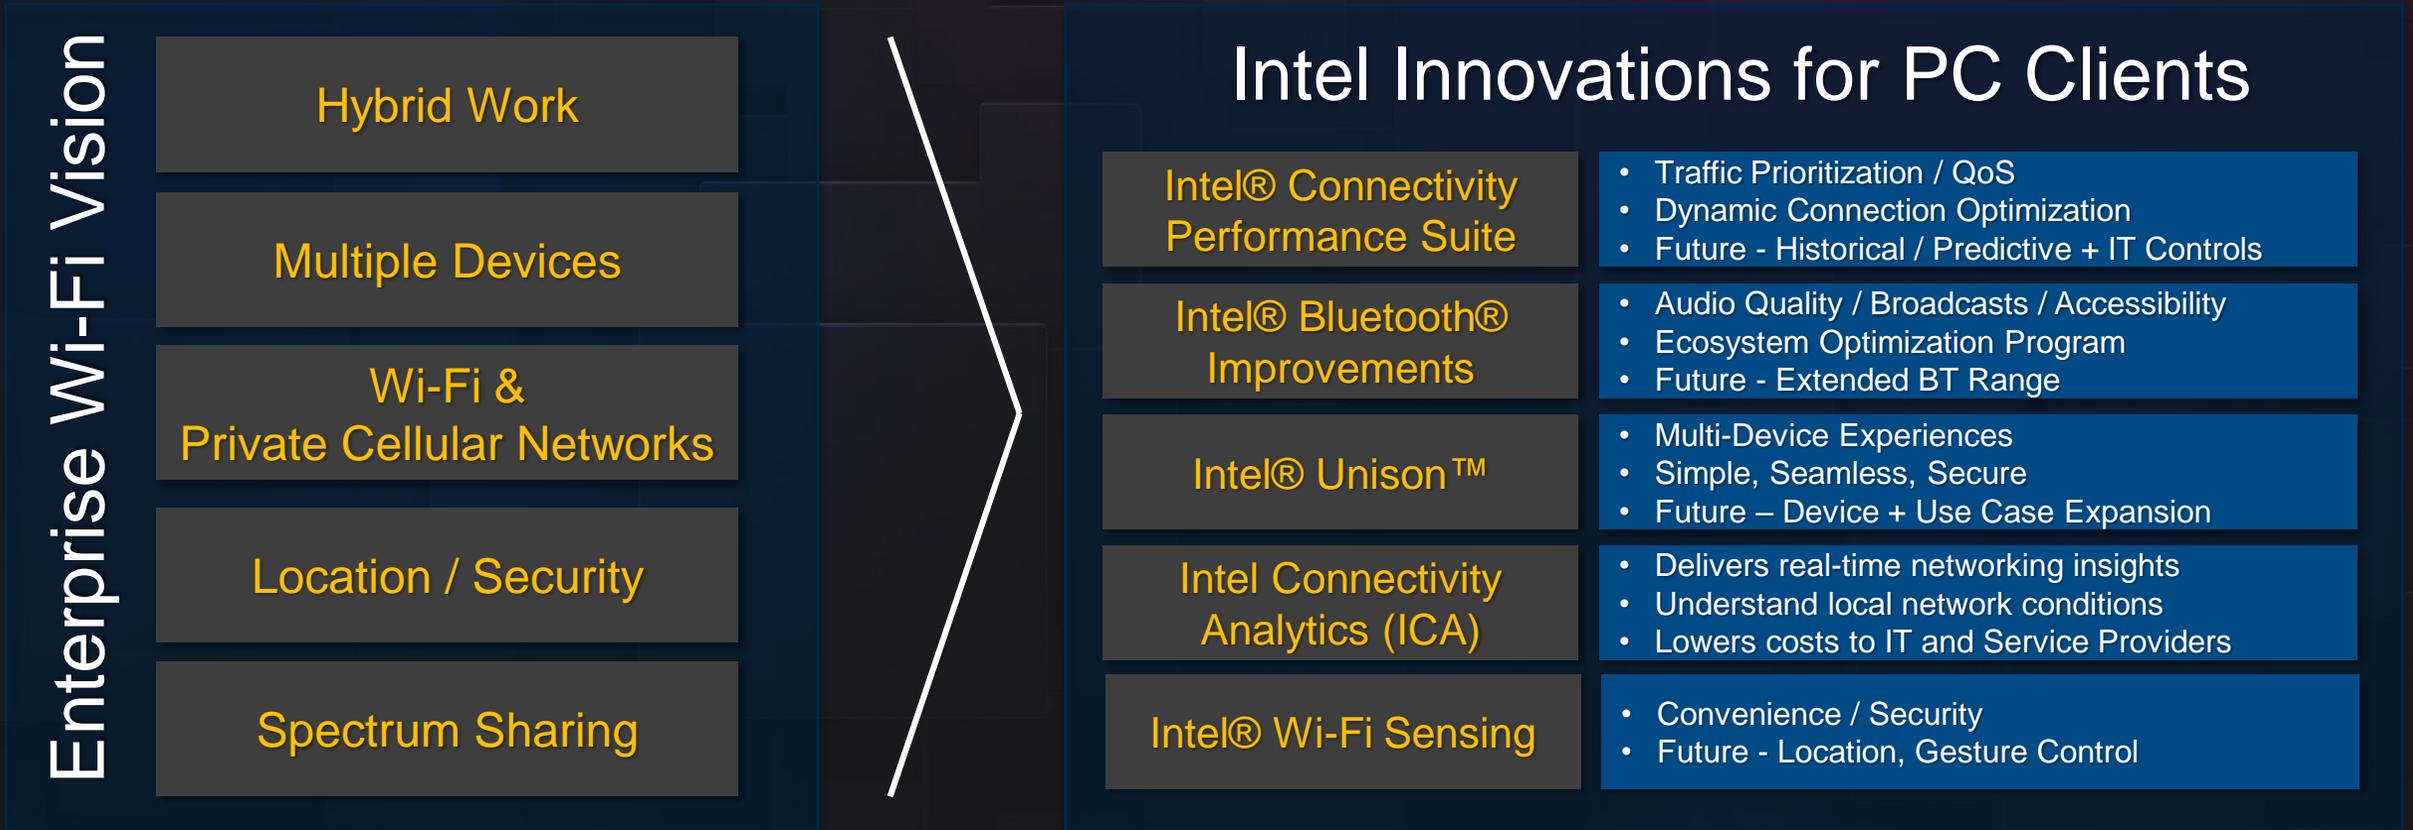

Wi-Fi 7 will revolutionize the enterprise wireless user experience

Next-Generation Intel® Wi-Fi 7 (5 Gig)

>140 PCs Design Wins on Intel Wi-Fi 7 YTD
Wi-Fi 7 is expected to represent >1/3 of all Intel PC volume by 2025

Enhancing the Enterprise User Experience

The PC is the enterprise user's primary experience hub

Wrap Up...

High quality Wi-Fi connectivity is critically for your customers

6 GHz & Wi-Fi technology advancements will help accelerate innovation

Industry collaboration is critical to create the best enterprise user experience!

Thank You!

Questions?

Notices & Disclaimers

Wi-Fi 6E device tracking summary is public information compiled by Intel from vendor websites, press announcements, and third-party device reviews. Intel provides this assessment for informational purposes only, can not guarantee its accuracy, and it's subject to change without notice.

6 GHz Wi-Fi 6E and Wi-Fi 7 laptop functionality require Intel® Wi-Fi 6E/7 products, Wi-Fi 6E/7 APs/Routers/Gateways, and Operating System support, along with country-specific 6 GHz spectrum allocation for non-licensed use and associated regional regulatory approvals. 6 GHz may not be available in some countries.

While Wi-Fi 7 is backward compatible with previous generations, new Wi-Fi 7 features require PCs configured with Intel Wi-Fi 7 solutions, PC OEM enabling, operating system support, and use with appropriate Wi-Fi 7 routers/APs/gateways.

Wi-Fi 7 products can access 320 MHz channels in 6 GHz and new 160 MHz channel combinations in both 5 and 6 GHz with new Multi-Resource Unit Puncturing capabilities.

Based on IEEE 802.11be draft specification, the maximum theoretical data rates for 2-stream devices that support 320 MHz channels and 4K QAM is 5.8 Gbps.

Intel engineering simulations of congested network environments indicate major latency reduction is possible with new Wi-Fi 7 Multi-Link Operation capabilities.

Intel is committed to protecting individual's privacy. For additional information, please refer to [Intel's Privacy Notice](#).

All product plans and roadmaps are subject to change without notice.

Statements in this document that refer to future plans or expectations are forward-looking statements. These statements are based on current expectations and involve many risks and uncertainties that could cause actual results to differ materially from those expressed or implied in such statements. For more information on the factors that could cause actual results to differ materially, see our most recent earnings release and SEC filings at www.intc.com.

For additional details, please visit www.intel.com/performance-wireless

Performance varies by use, configuration, and other factors.

Why OpenRoaming? Unifying Access Across SP and Enterprise

Why OpenRoaming?

Unifying Access across SP and Enterprise

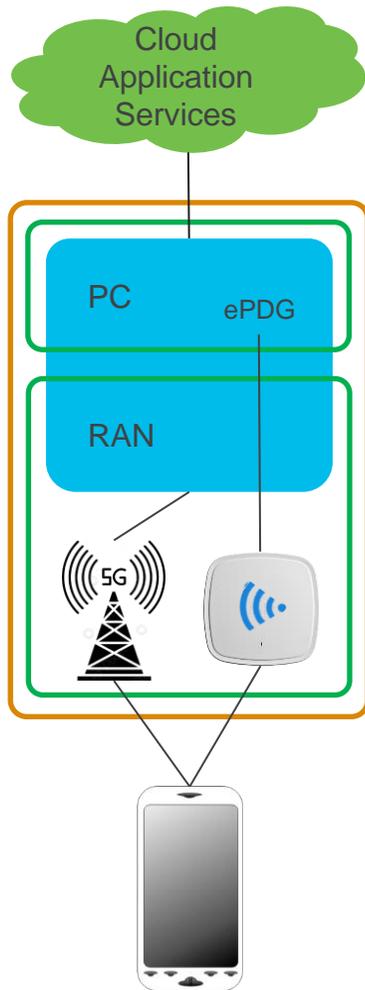

Matt MacPherson, Cisco Wireless CTO

WBA Wireless Global Congress – Paris
October 2023

Wireless Access as a Service

“Tightly Coupled” Access Model

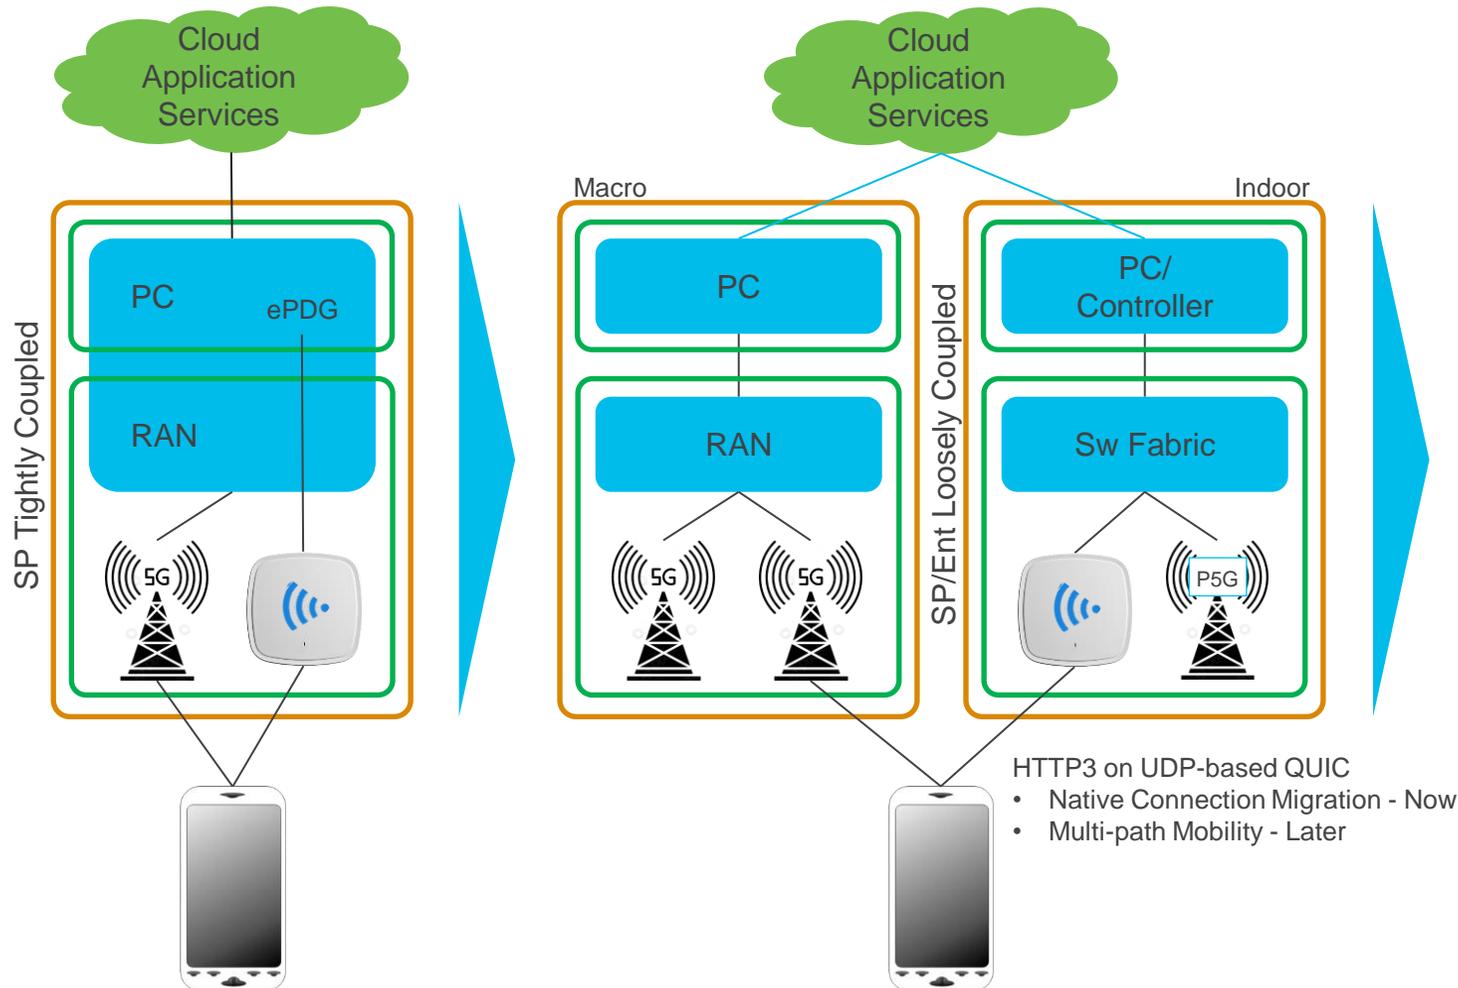

Advantage:

- Network Manages Path
- Network Manages Mobility
- Network is optimized for maximum number of users
- Network Manages Experience (Carrier Class)

Wireless Roaming as a Service

“Loosely Coupled” Access Model

Loosely Coupled...

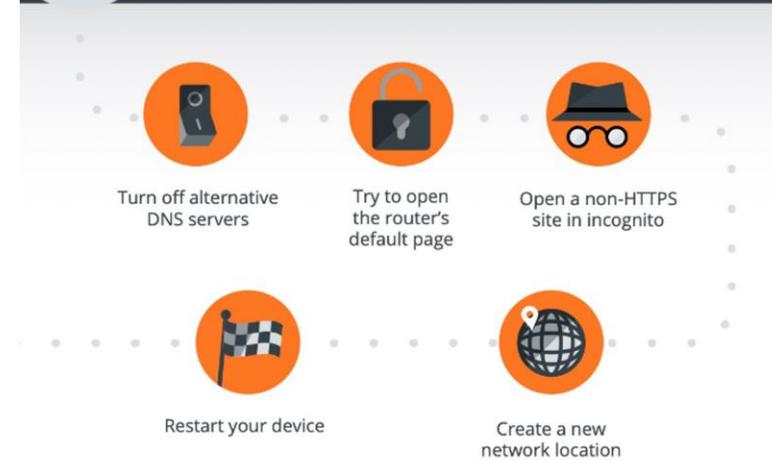

- Is the dominant use-case
 - We all live loosely coupled today
 - Doing a portal is loosely coupled
- Enables OTT Application mobility
- Solves the tightly coupled objective
- Requires all paths to be connected

...but... connectivity is a manual* process
 ...until... OpenRoaming

Portal Pain

Onboarding is top pain point for IT

- The Good...
 - Can collect user information
 - Can advertise/monetize
 - T&Cs Acceptance
 - Billing Interface
- The Bad...
 - Don't work consistently across device platforms
 - Can "black-hole" your data
 - Users hate portals - #1 complaint from guest users
- The Ugly...
 - Breaks loosely-coupled seamless mobility
 - Users don't connect to your network – poor attach
 - Users turn off Wi-Fi

OpenRoaming: We must attach!

Enables new convergence models between Enterprise and SP (e.g. indoor coverage)

Healthcare Example: indoor coverage issues solved

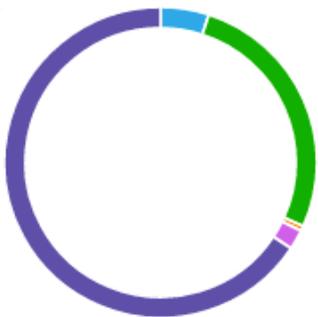

Customers Say...

- Happy visitors and patients
- Some users do not notice they are on Wi-Fi, but they notice good data / voice
- Reduced visitor coverage complaints
- Clinical staff can focus on core tasks instead of getting people connected
- Lower burden on IT staff
- Fast and cost-effective indoor coverage

SP's and Cloud IDP's

Devices By IDP

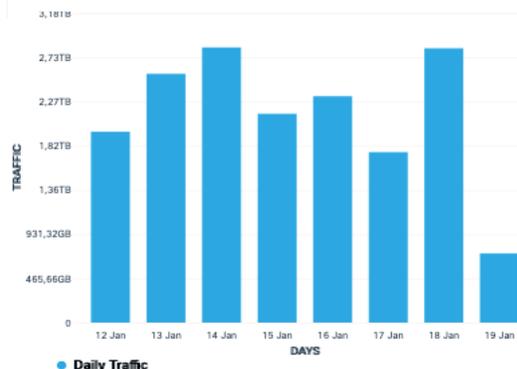

Distribution based on Identity provider.

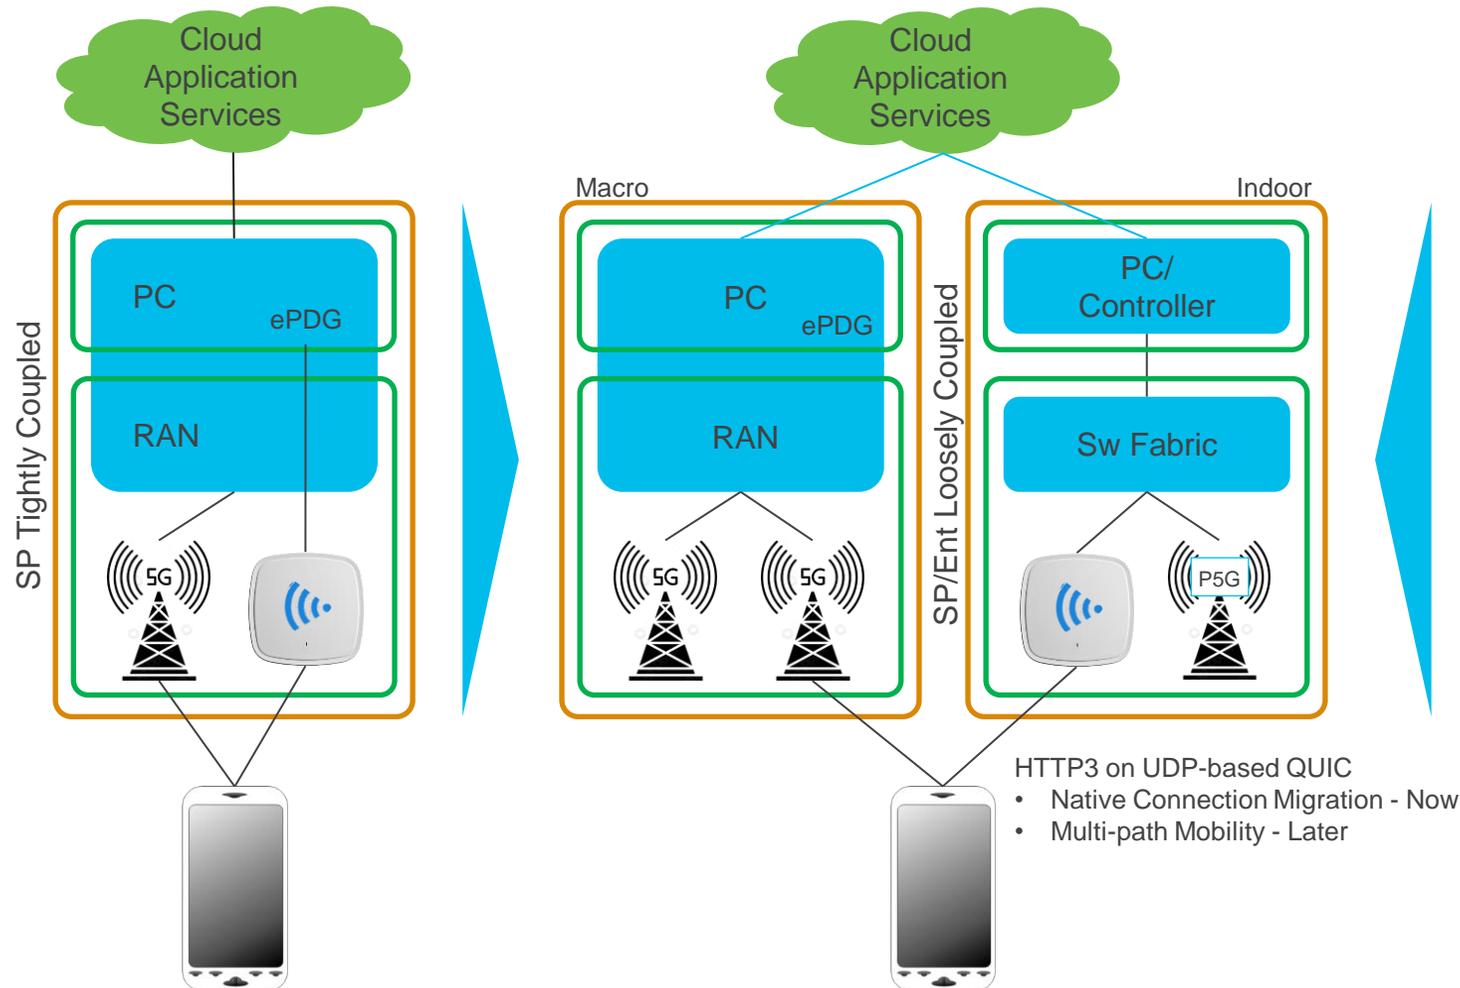

High Usage

Data Usage

Total data exchanged on the network during the selected period.

Loosely-Coupled Wins

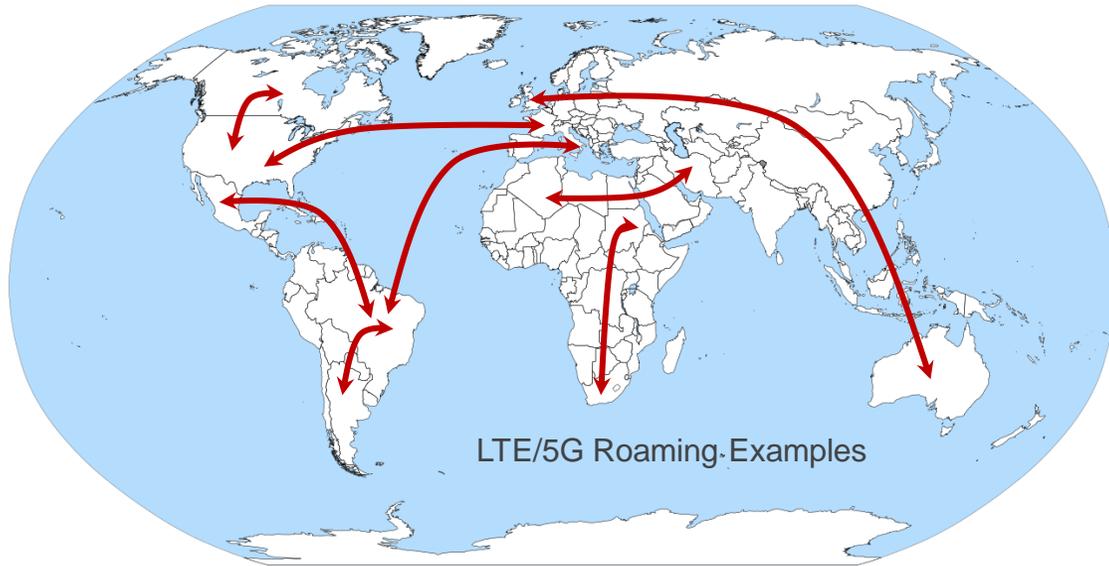

- Loosely Coupled with OpenRoaming:**
- Access Networks can have different owners
 - Access Networks can use different identities
 - Users gain access to all spectrum
 - Device-based path selection (with some user control – Wi-Fi Assist) is solved*
 - Roaming represents business relationships
 - OpenRoaming enables easy business
 - Enables new monetization capabilities
 - Scales – enables distributed and centralized access convergence

*solved – QUIC Native Connection Migration

Seamless Mobility

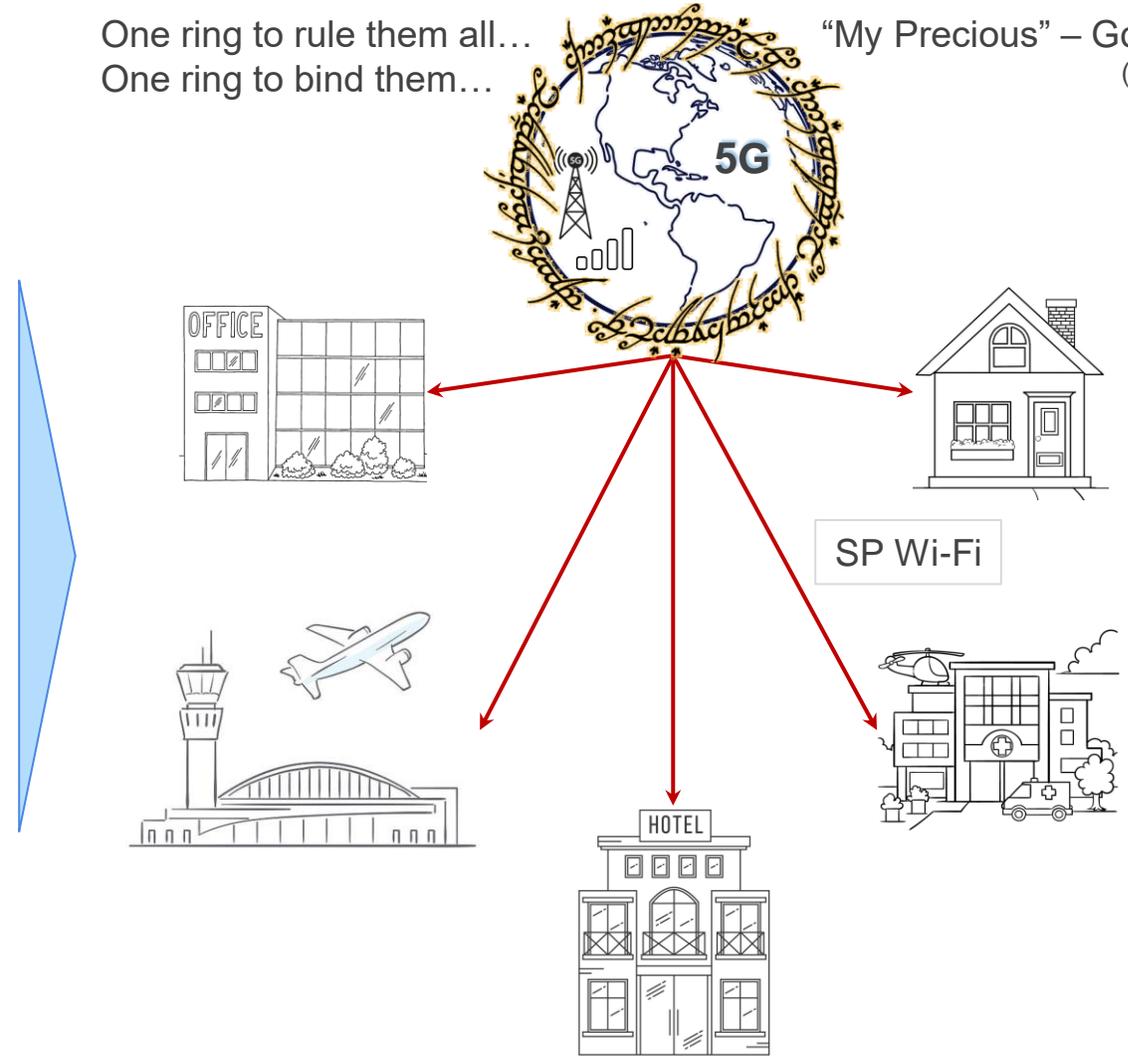

Homogeneous vs Heterogeneous

- Homogeneous Roaming (5G to 5G)
- Relatively small number of access networks <700

One ring to rule them all...
One ring to bind them...

“My Precious” – Gollum
(3GPP)

- Heterogeneous Roaming (multi-access, multi-identity)
- 5G is ubiquitous, hotspots for capacity & penetration
- Very large number of access networks >600,000,000

Federating Roaming

Crossing the homogeneous identity divide

• Why a Federation?

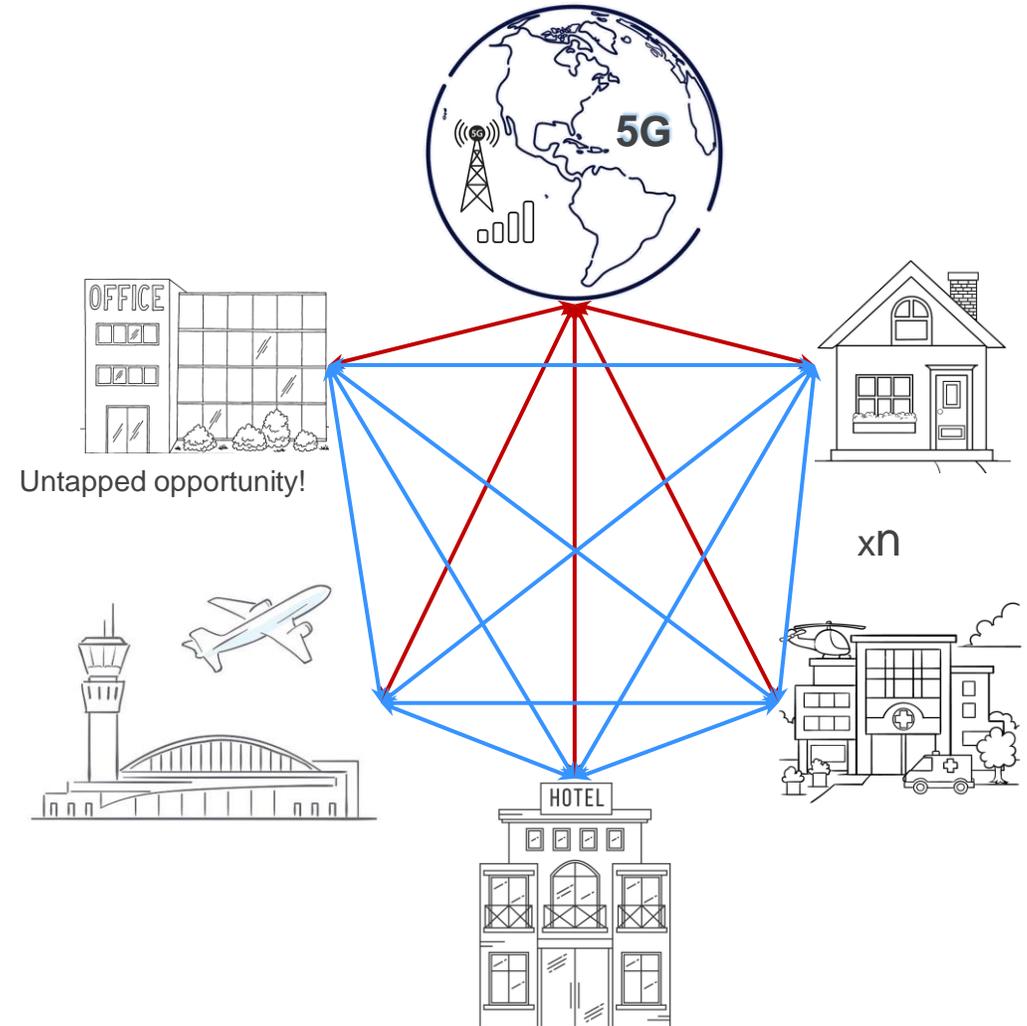

- Scale
 - >600M wireless access roaming partners
 - Multi-Access (Wi-Fi, 5G, ...)
 - Multi-Identity (MNO, MSO, ISP, Public, Loyalty, Social, Cloud)
 - Distribute network onboarding function
- Easy
 - Standard T&C's
 - Goes up and down market
 - Simple network connection to federation
- New Business Models
 - New monetization opportunities
 - Why just do B2C billing when you can do B2C and B2B?

Would enterprise pay for enterprise-class productivity while roaming?

They already do!

Would enterprise allow roaming onto their guest network?

They already do! (usually manually)

Cisco Example:

- 6% connections to Wi-Fi is guest
- Access is 10x over-provisioned
- OpenRoaming increases attach 4x
- **Guest consumes 2.4% of Wi-Fi capacity!**

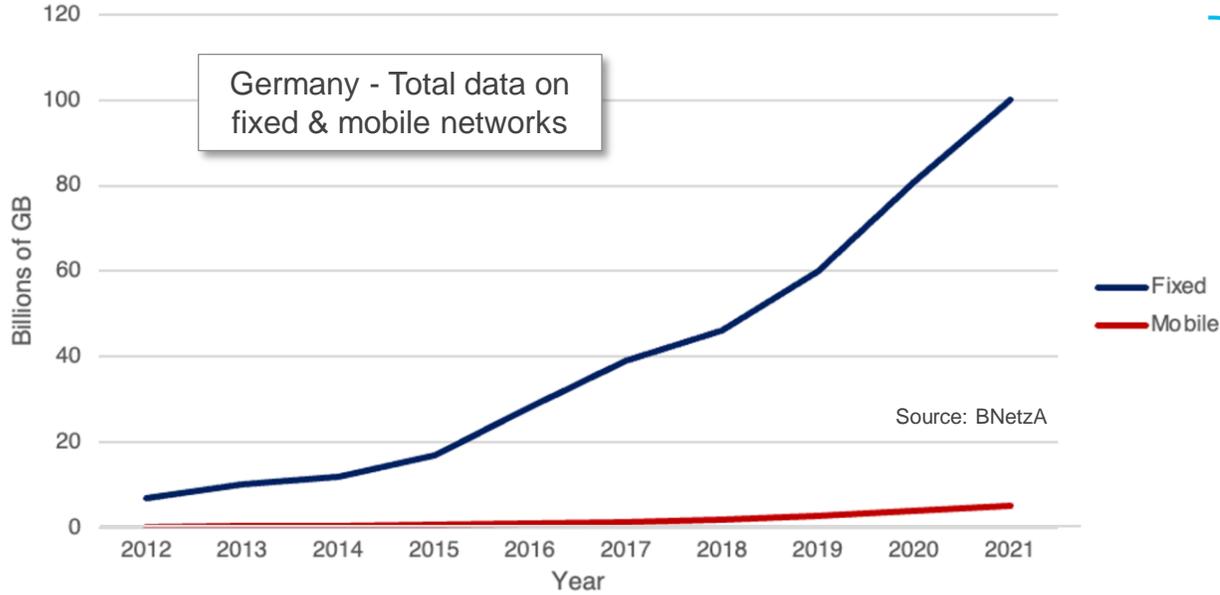

What drives all IT decisions for enterprise networking?

Increased Productivity

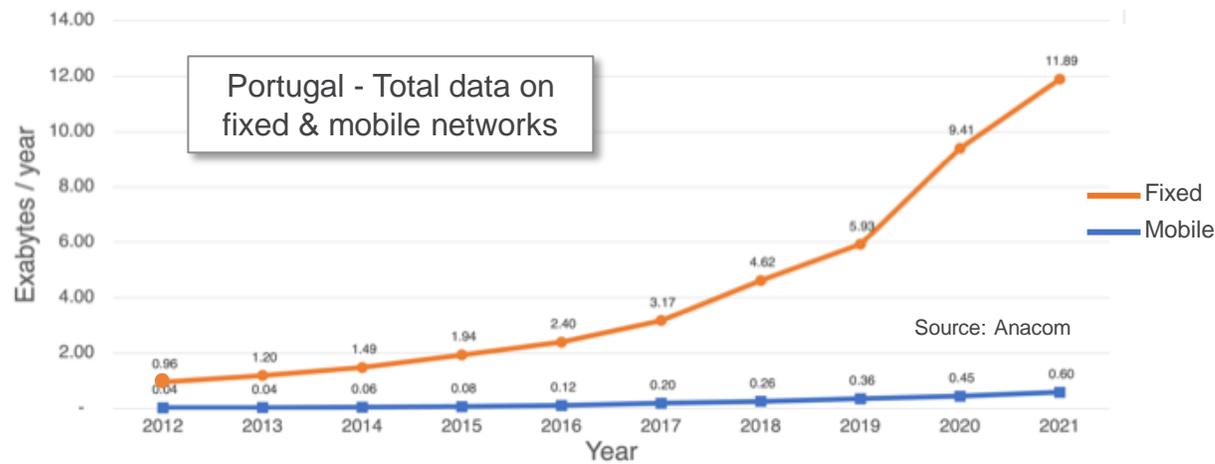

Meeting Digitization Demand

Maximizing Spectrum Capacity – cost effectively

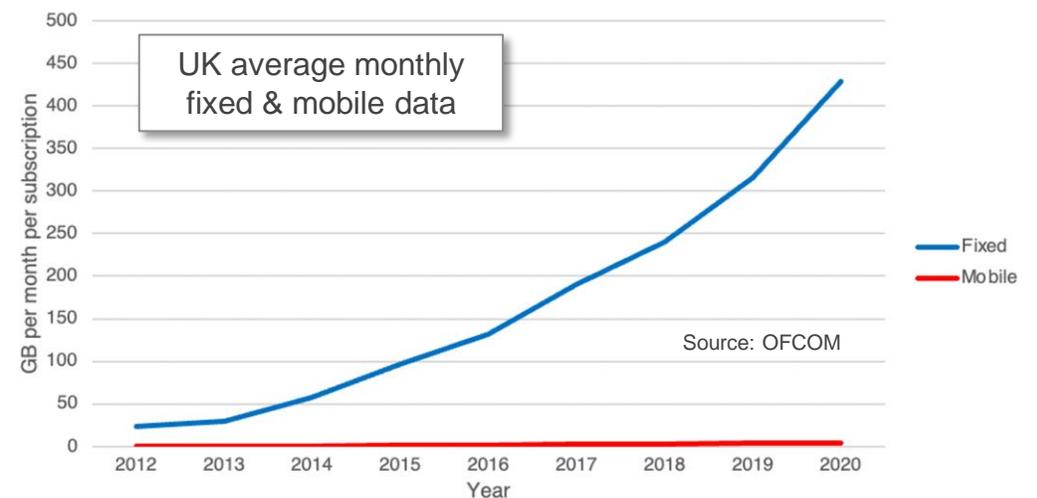

Country Consumption

Wi-Fi relays 92.3% of the overall fixed broadband traffic in Europe

Subscriber Consumption

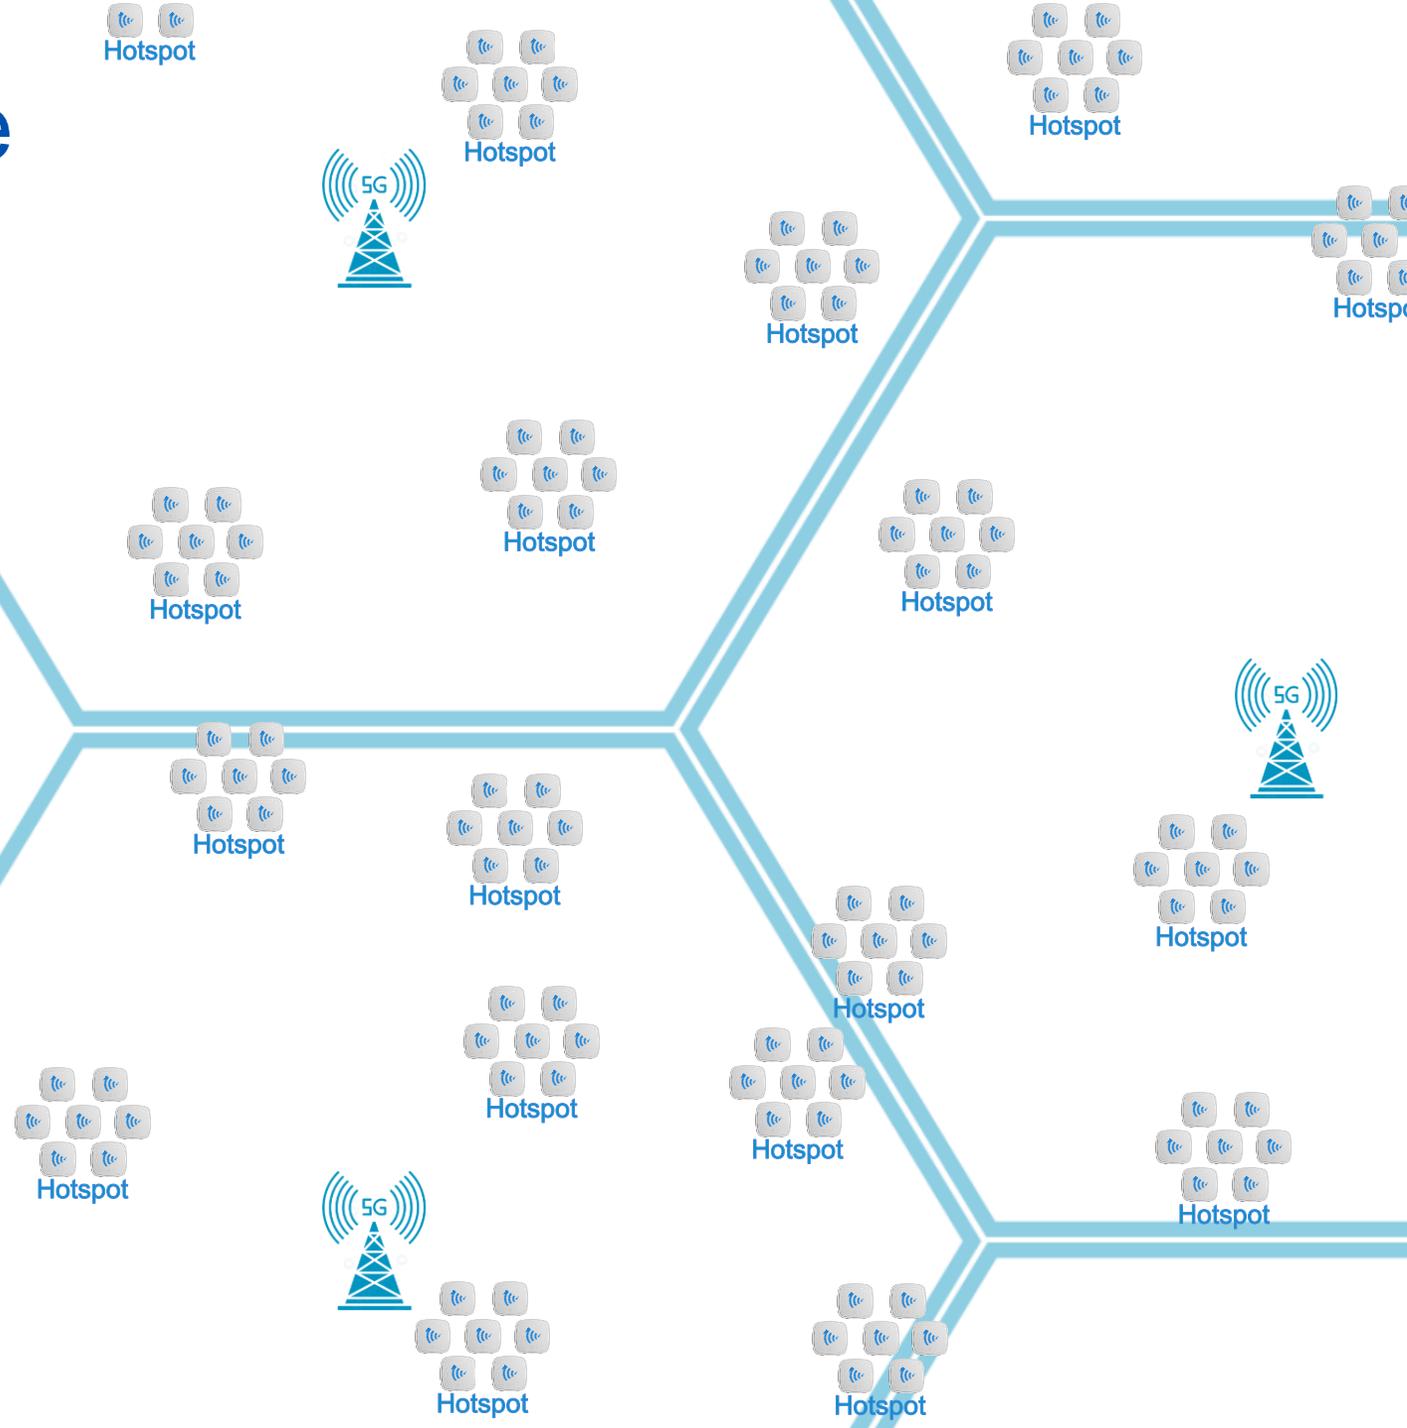

Wi-Fi as a cost-effective densification strategy

It already is!

- Wireless Capacity is solved by –
 - Improving L1
 - modulation, coding, power, beamforming, interference mitigation – incremental gain, replacing network and devices is expensive
 - Adding spectrum – high gain, but hard to get
 - AP/Cell Densification – high gain, but expensive
- Leverage All Investment
 - \$B's in investment in Wi-Fi hotspots deployments
 - adds spectrum, high re-use, solves densification
 - \$B's in investment in Cellular deployments
 - ubiquitous coverage, connects the hotspots

The best service provides access across all loosely coupled networks

CONNECTING EVERYTHING

Converging Cellular & Wi-Fi

Network convergence brings all technologies together under one platform to achieve enterprise-wide connectivity and power connected use cases.

CONVERGED NETWORK

DAS

Improves cell service, eliminating dead zones and boosting signal strength for all wireless carriers including AT&T, T-Mobile and Verizon Wireless.

Wi-Fi 6/6E & Wi-Fi 7

Supports fast download and upload speeds, which means enhanced efficiency, speed, capacity and performance.

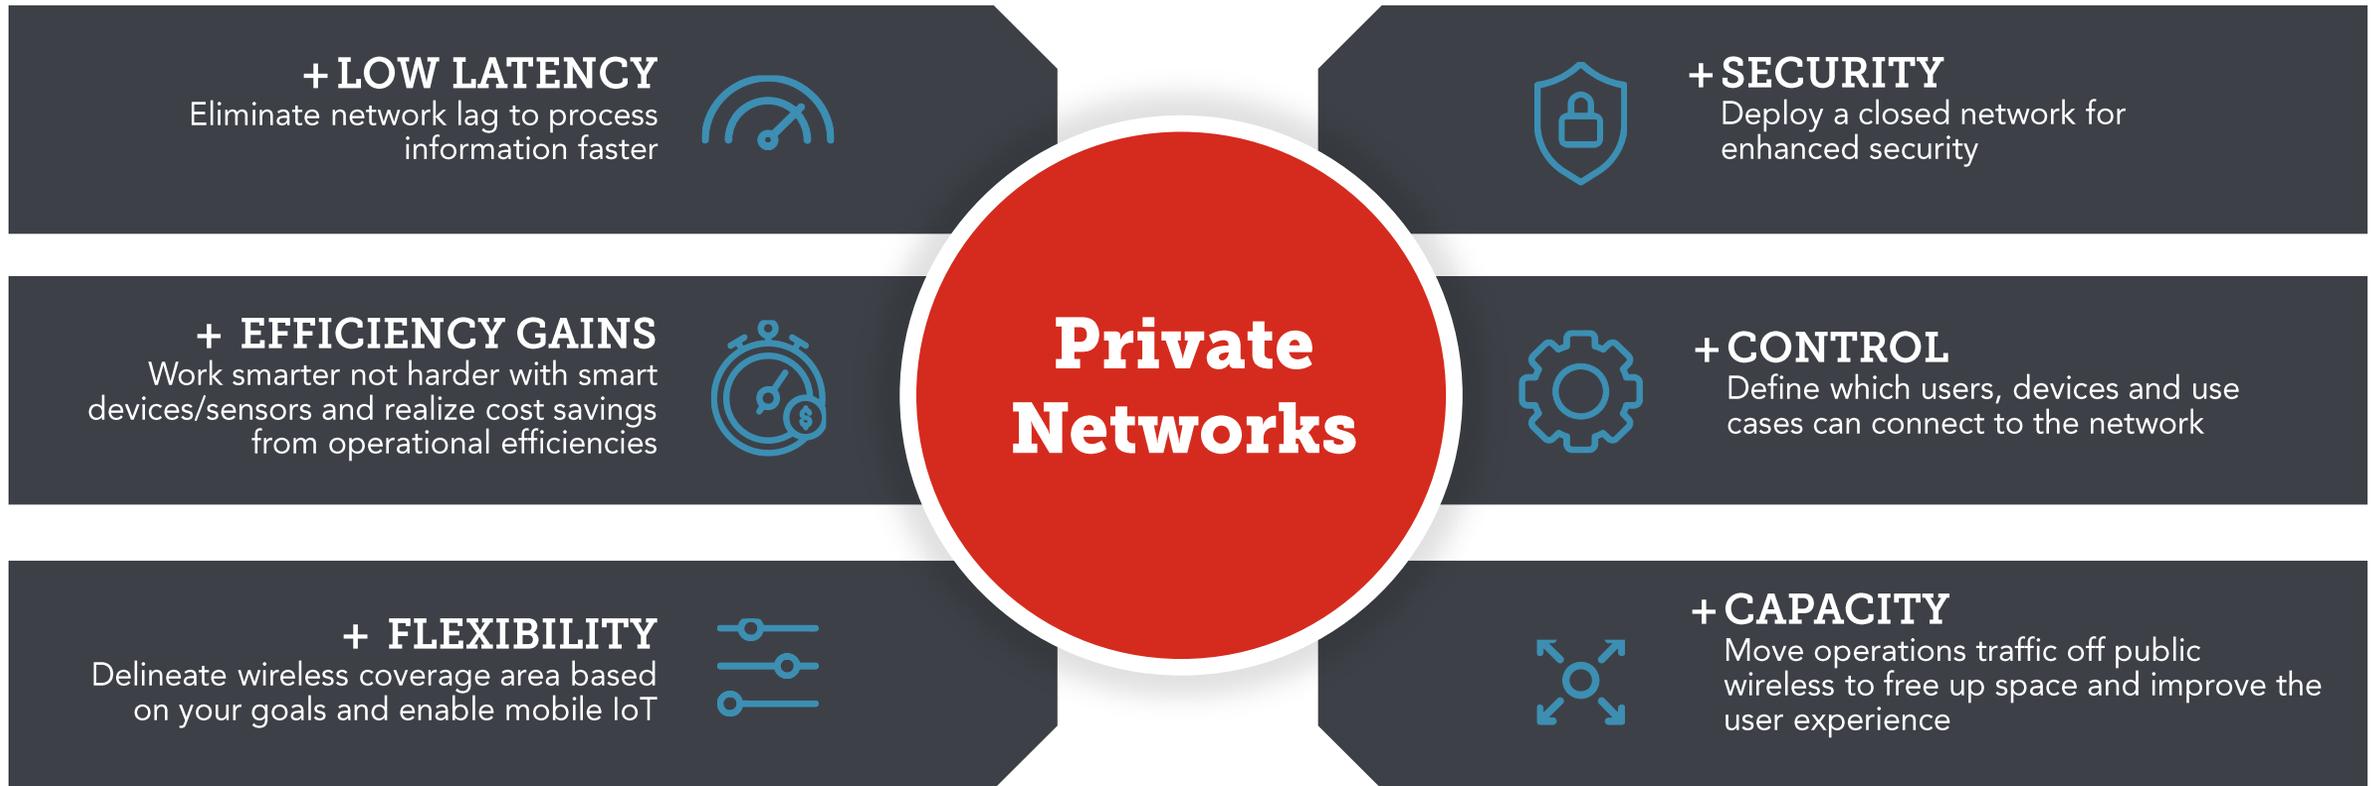

Private Networks

Powers IoT and critical communications with a reliable and secure network.

Private 5G

Private cellular solutions power **digital operations**, **securely connect smart devices** and **drive operational efficiencies**.

Newark Airport Terminal A

\$2.7 billion, 1+ million square-foot terminal is expected to handle 14 million passengers annually.

CHALLENGES

- **Connectivity needed for passengers**
- **Network for critical operations – bag reconciliation systems, bag scanners, digital signage, staff iPads**
- **Coverage needed on the tarmac**
- **Capacity and security to support use cases**

SOLUTIONS

- **Converged DAS, Wi-Fi 6 and Private LTE networks**
- **CBRS for dedicated location on the tarmac**
- **DAS & Wi-Fi for streaming, social media, mobile apps**
- **Wi-Fi to enable standard IoT devices**

OUTCOMES

- **Cost and time savings**
- **Seamless digital journey for enhanced passenger experience**
- **Scalable network**
- **Layered cybersecurity platform**

Padres Petco Park

Better Guest Experience. Better Bottom Line.

~ **30%**

Less Wait
Time in Line

~ **50%**

Less Line
Abandonment

~ **10%**

Increase in
Bottom Line

ADAPTIVE AI

A staggering 60 percent of IT professionals spend the equivalent of one day a week doing nothing but Wi-Fi troubleshooting.

Even more shocking is that 15 percent of engineers spend over half their time troubleshooting Wi-Fi issues.

In 52 percent of cases, the process of just isolating the problem takes over an hour.

Understanding Quality of Service (QoS)

QoS technology allows the network to automatically prioritize the most important data functions.

- Ensures seamless connectivity for the things that matter most
- Acts as a layer of connectivity insurance for priority items
- Applies only when network demand surpasses a certain threshold
- Addresses bandwidth limitations in dense, congested indoor environments

Data + AI is a Powerful IT Tool

Leverage data to make IT more effective, proactive and predicative.
The end goal is faster business outcomes and unified tools across all teams.

Speed Up Investigations

Spot trends and pinpoint root causes leveraging metrics and logs

Streamline Monitoring

Visibility to services, apps, physical, virtual, and cloud infrastructure

Analyze System Health

Service insights & event analytics to focus on what's important, not just what's noisy

Act & Increase Productivity

Smart collaboration, orchestration and automation

Securing Digital Transformation

Zero trust architecture and comprehensive data privacy practices.

Security Policies

Strictly implemented and reviewed annually.

24/7/365 Monitoring

Sophisticated technologies give network operations team critical insights should rapid response to a compromised network be required.

Intrusion Prevention and Detection

Systems for intrusion prevention and detection.

Protected Access

Layer 2 encryption for Passpoint connections.

Vulnerability Scans

Network vulnerability scans are performed for network control.

Client Isolation

Blocks attackers and infected devices brought on from Peer to Peer (P2P) networking.

NIST Cybersecurity Framework

Alignment of organizational goals and objectives to NIST cybersecurity framework with quarterly tier evaluation.

Security Awareness Education

Practice safe cyber habits and employ mandatory cybersecurity training.

Firewall Protection

Enterprise firewalls placed internally and externally at ingress/egress points.

Risk Management

Endpoint protection software and security patches are installed on all data processing servers and computer workstations and are automatically updated.

Critical Systems Encryption

All confidential data is encrypted.

- Research - standards - product development
- Semiconductor evolution
- Spectrum availability and allocation

6G Position Statement

An Operator View
v1.0
www.ngmn.org

NGMN, established in 2006, is a global, operator-led alliance of over 80 companies and organisation spanning operators, manufacturers, consultancies and academia.
[NGMN 6G Position Statement.pdf](#)

New Services and innovation

- ★ New features
 - Network APIs
- ★ Seamless integration with satellite and fixed

Operational priorities

- ★ Network Simplification
- ★ Energy reduction
 - Automated operations
 - Proactive management for user experience
 - Quantum-safe

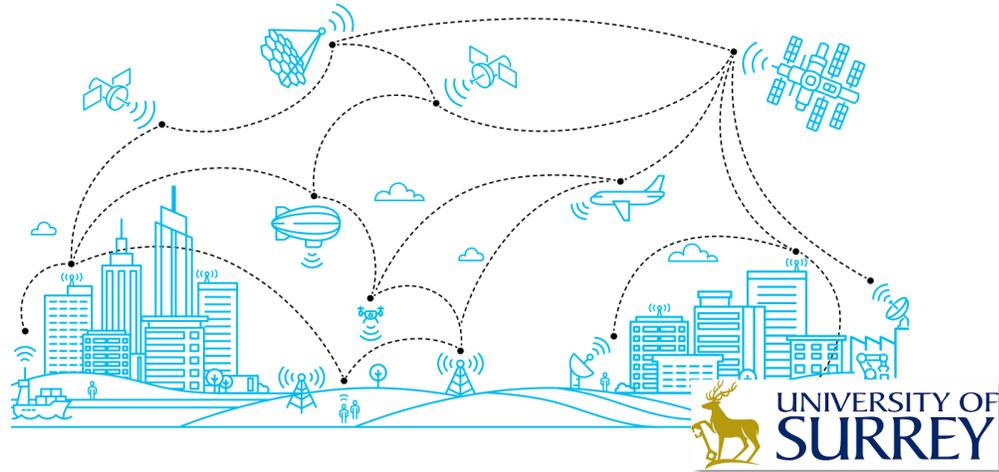

Guiding Principles

- Global harmonization
- No hardware upgrade
- Software upgrades
- No degradation to 5G
- No service impact
- ★ Customer needs across mobile, fixed and NTN
- ★ Backward compatibility
 - Robust security by design

Spectrum

- Sub 7GHz remain essential for coverage
- 6-15 GHz licensed for IMT-2020 and beyond
- Sub-THz bands may adopt a new IMT-20230 radio technology

★ Wi-Fi has a role to play

Network of Networks

Local and private networks built by a wider range of entities: Increasingly, wireless networks are being deployed for local and private needs, with denser networks of cells both indoors and outdoors, deployed by shared infrastructure companies (neutral hosts) and by enterprises for their own needs. 6G should be designed from the onset to fully reflect these new usage and deployment scenarios.

Integrated, converged networks: There are several dimensions in which 6G could bring together previously separate technologies and deployment styles:

- **non-terrestrial networks:** Networks increasingly use a combination of terrestrial infrastructure with non-terrestrial network segments, including satellites, airborne base stations on unmanned aerial vehicles ('drones') and high altitude platforms (balloons), plus base stations on moving platforms such as trains, buses and ships
- **cellular and short-range technologies:** In the past, mobile **cellular** technologies and short-range technologies such as **Wi-Fi** developed on predominantly separate paths. The expanded range of applications for wireless technology however suggests an even greater role for converged integration and interworking between these technologies than we are seeing today
- **incorporate local area and indoor applications:** The use of spectrum such as sub-terahertz and millimetre wave, as well as applications such as sensing, suggest that 6G should explicitly take greater account of local area and indoor applications, some of which may not even be connected to a wider network.

6G should natively support all of these use cases with full integration to maximise the options for **cost-efficient deployment** and to extend the reach of networks to all environments. It should allow different **network segments** – terrestrial, satellite, **indoor**, licensed, **unlicensed**, public and private – to be **interconnected seamlessly and securely**.

Key benefits of a Network of Networks

A BT perspective

Reliable service, where customers need it, when they need it

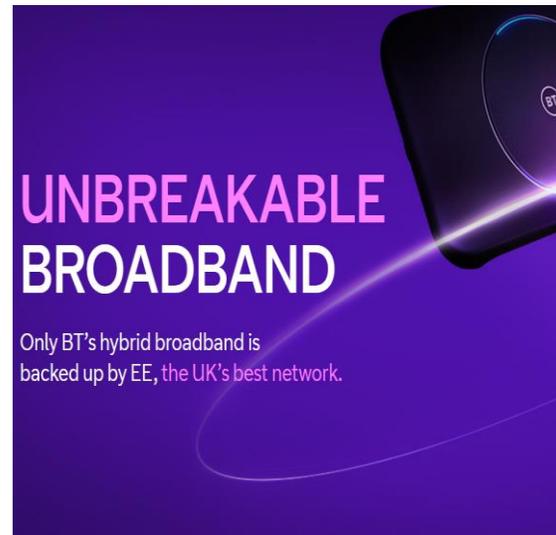

Always best-connected seamless user experience

Efficient traffic delivery (including energy consumption)

Enable new business models and overall industry growth

Net zero

We've pledged to become a net zero business by the end of March 2031 and we're targeting net zero for our supply chain and customer emissions by the end of March 2041.

New network-as-a-service enables customers to boost performance, cost, security and sustainability

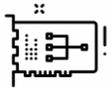

Lessons learnt and key messages

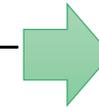

Industry **fragmentation** can lead to silo innovation, sub-optimal industry economics, and **customer confusion**.

Opportunity for **disruptive** technology providers being **solution-driven** and not technology-led.

End to end solutions, including **device** support are key – also beyond smartphones !

Industry solutions must be a **win-win** for all parts of the ecosystem – open device architectures welcome !

Efficient delivery of traffic is key to a sustainable future.

Our industry needs **both** continuous efficiency improvements as well as growth

New feature deployment must be **business case-driven** via software updates (ideally across multiple technologies).

Open architectures, automation, Network APIs and multi-access solutions are key enablers to **business model innovation** as fuel for growth

Thank you

Maria Cuevas

(Ratification date) Products available in the market typically ~18 months prior

Products implementing 802.11ax-2021 are in the market now: Wi-Fi 6, 6E
 2022: 2.3 Billion Wi-Fi 6 devices, 350 Million Wi-Fi 6E, 4.4 Billion devices total

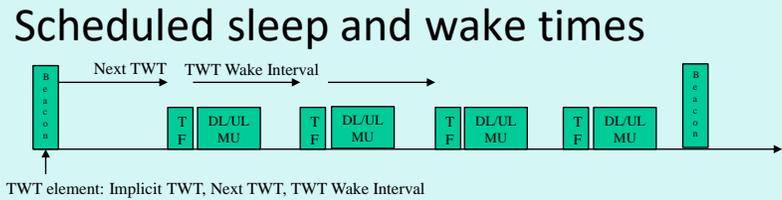

Spectral Efficiency & Area Throughput

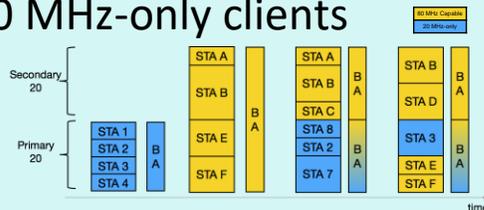

High Density

Power Saving

20 MHz-only clients

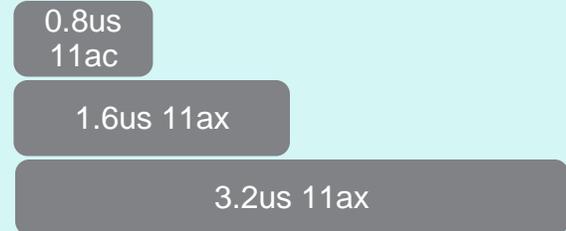

Outdoor / Longer range

Extended range packet structure

Enhanced delay spread protection - long guard interval

Wi-Fi 7: Commercial reality

- 2023 Q4 – Initial Infrastructure products
- 2024 Q1 – Initial Devices
- 2024 Q4 – Market builds (802.11be standard ratified)
- 2025 – Commercial Reality ??

802.11be: Supports increased throughput and performance (Wi-Fi 7)

Throughput and spectral efficiency

- 320 MHz bandwidth operation
- 8 Spatial Streams and 4096-QAM (Quadrature Amplitude Modulation)
- Multi-Link Operation (MLO)
- Multiple Resource Unit Operation (MRU)
- MIMO protocol enhancements, Enhanced Sounding protocol

Low latency

- Multi-band/multi-channel aggregation and operation (MLO)
- Target Wait Time (TWT) enhancements - crosslink and aligned TWT
- TXOP Sharing
- Stream Classification Service Enhancements
- National Security and Emergency Preparedness (NSEP) priority access operation

Enhancements re: 6 GHz support

- Static Puncturing to avoid pre-defined 20 MHz subchannels, supports efficient, higher bandwidth 6GHz operation
- GCMP-256 support (High performance cipher)

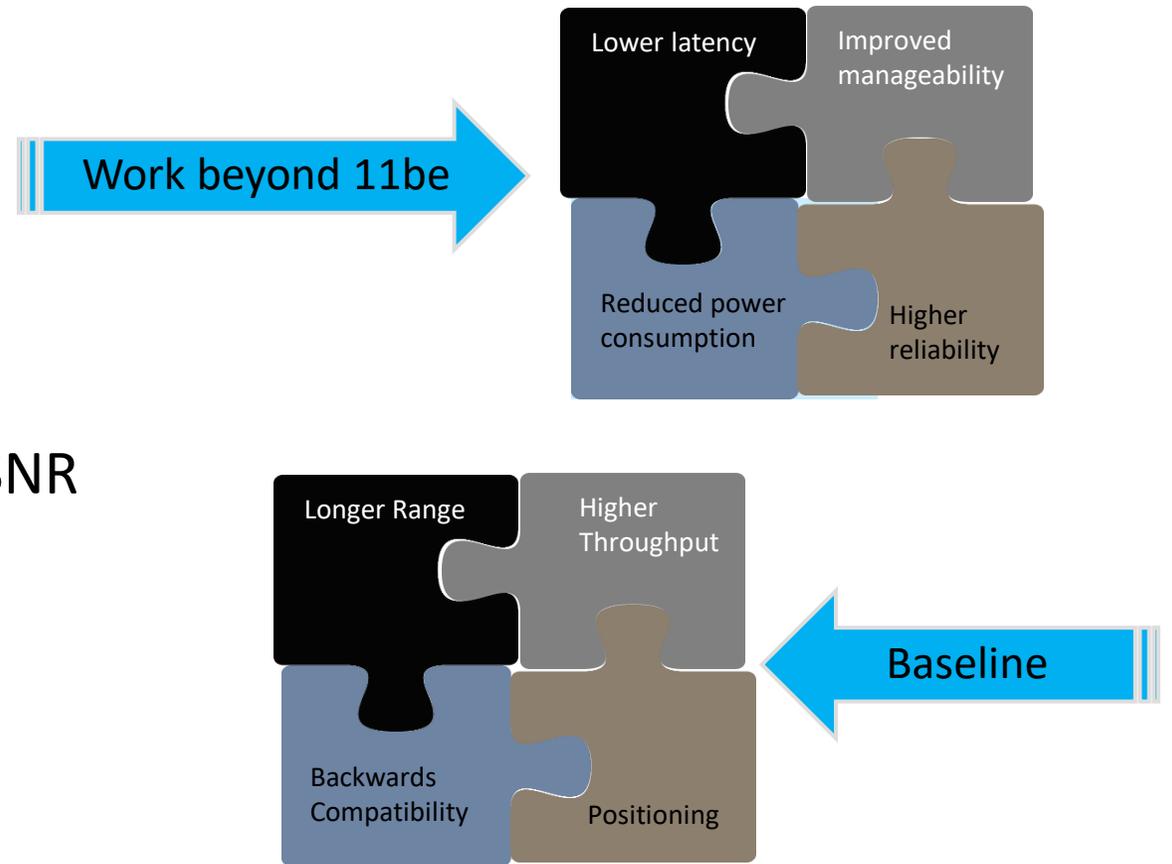

Use Cases:

- Home, enterprise, industrial, IoT
- Outdoor
- AR/VR
- 4K and 8K video streaming
- Remote office
- Cloud computing
- Video calling and conferencing

802.11bn: Ultra High Reliability Task Group to start in November 2023 defining next MAC/PHY project (**Wi-Fi 8**)

The Study Group investigated technology to:

- improve reliability of WLAN connectivity
- reduce latencies
- increase manageability,
- increase throughput including at different SNR levels
- reduce device level power consumption
- reduce packet loss rate

IMMW: Integrated Millimeter Wave

- New study group to meet in November 2023
- Aim is to “specify carrier frequency operation between 42.5 and 71 GHz that leverages the MAC/PHY specifications in the existing Sub 7 GHz bands (including 802.11bn)”
- Re-use 11ac (Wi-Fi 5), 11ax (Wi-Fi 6E), 11be (Wi-Fi 7) and 11bn (Wi-Fi 8) PHY updates in the millimetric bands.

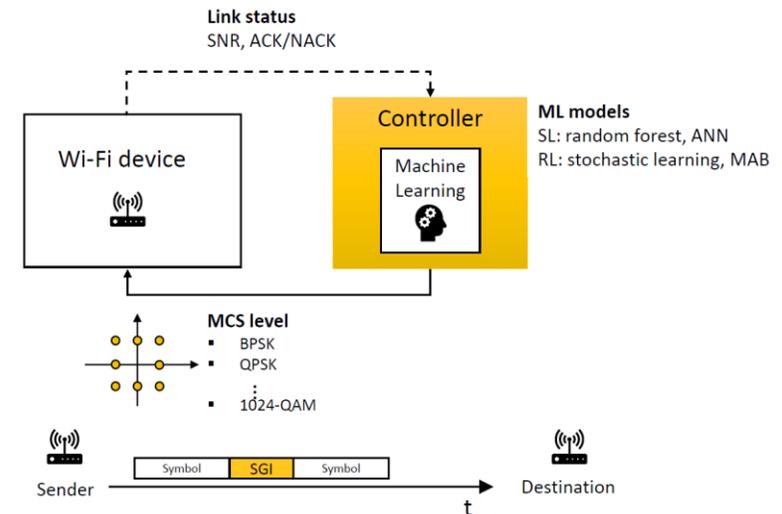

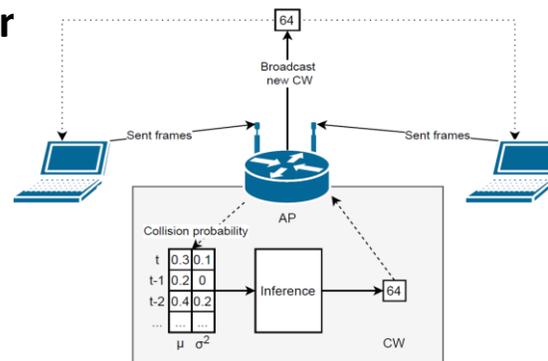

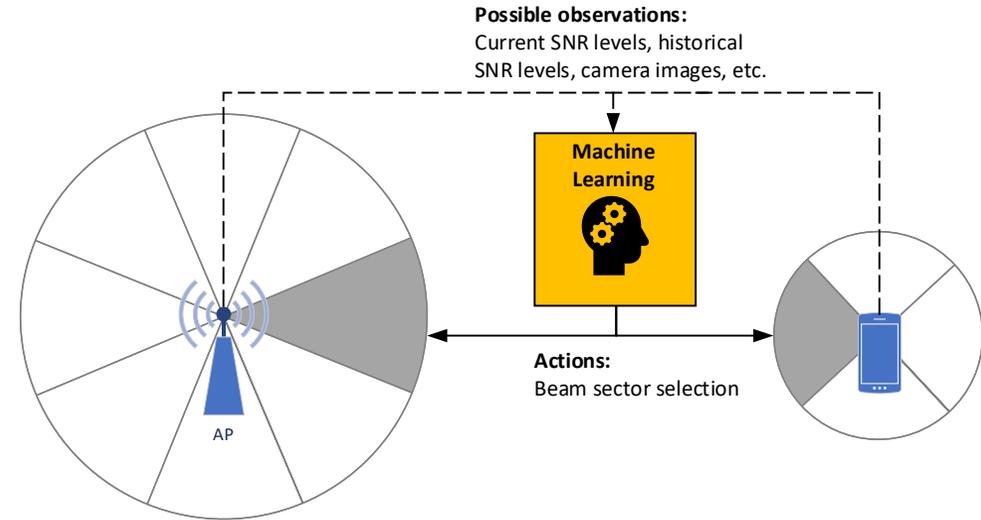

AIML TIG: Investigate WLAN support of Artificial Intelligence/ Machine Learning

Use of AIML for 802.11 applications is an active area of work in the research community. See [Applying ML to 802.11: Current Research and Emerging Use Cases](#)

Current applications focus on performance improvement parameter selection for channel access control and link adaptation, multi-user parameters, contention window sizes, channel usage, improved BSS transition

Focus of the 802.11 AIML Topic Interest Group is to Describe use cases for Artificial Intelligence/Machine Learning (AI/ML) applicability in 802.11 system

Investigate the technical feasibility of features enabling support of AI/ML.

AMP SG: Investigate WLAN support of Ambient Power

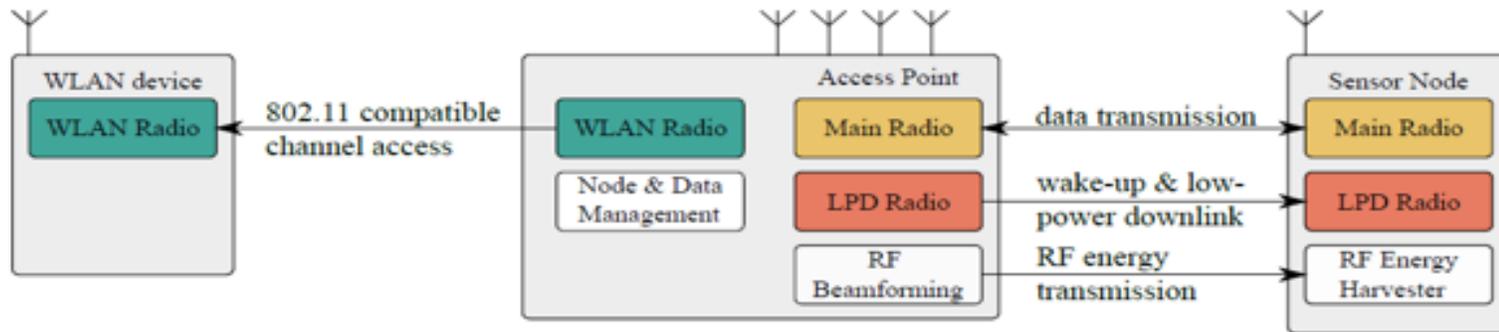

Research into ambient power (energy harvesting) and prototype development has been ongoing using 802.11 based devices

Optimizing M2M Energy Efficiency in IEEE 802.11ah, IEEE GLOBECOM 2015

“the battery dependency of an 802.11ah sensor is significantly lowered by energy harvesting provided that the sensor size and energy harvesting efficiency are sufficient for the utilized ambient energy source.”

Low-Power Downlink for the Internet of Things using IEEE 802.11-compliant Wake-Up Receivers, IEEE INFOCOM 2021

Use Cases include Smart Home, Logistics/Warehouse/Inventory, Industrial Wireless Sensor Networks

See <https://mentor.ieee.org/802.11/dcn/23/11-23-0436-00-0amp-technical-report-on-support-of-amp-iot-devices-in-wlan.docx>

Wi-Fi evolution needs 1200 MHz of global harmonized 6 GHz spectrum to support next generation use cases

- Future connectivity and economic value increase will depend on Wi-Fi 6E and Wi-Fi 7
- 6 GHz band is uniquely suited (no alternative) to support growing Wi-Fi spectrum needs
- Next use cases: immersive AR/VR/XR for training, industrial, telehealth, automation, 3-D video, also supports dense deployments
- Standard Power Devices with AFC is the most efficient and practical solution to deliver connectivity to underserved areas while coexisting with existing fixed services in the band.

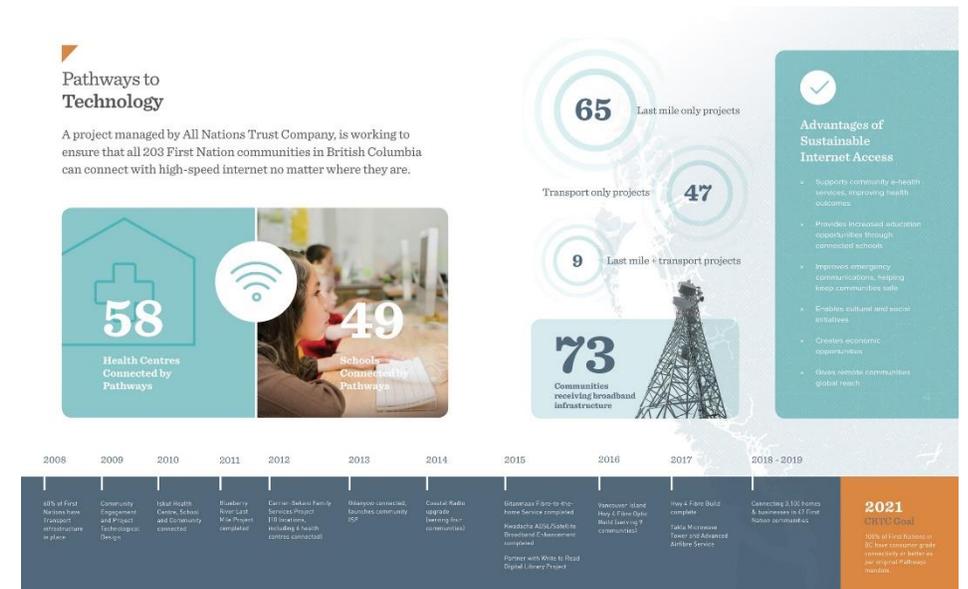

- See <https://www.wi-fi.org/countries-enabling-wi-fi-in-6-ghz-wi-fi-6e>

Wi-Fi networks are being deployed globally to extend Broadband wired and wireless backhaul

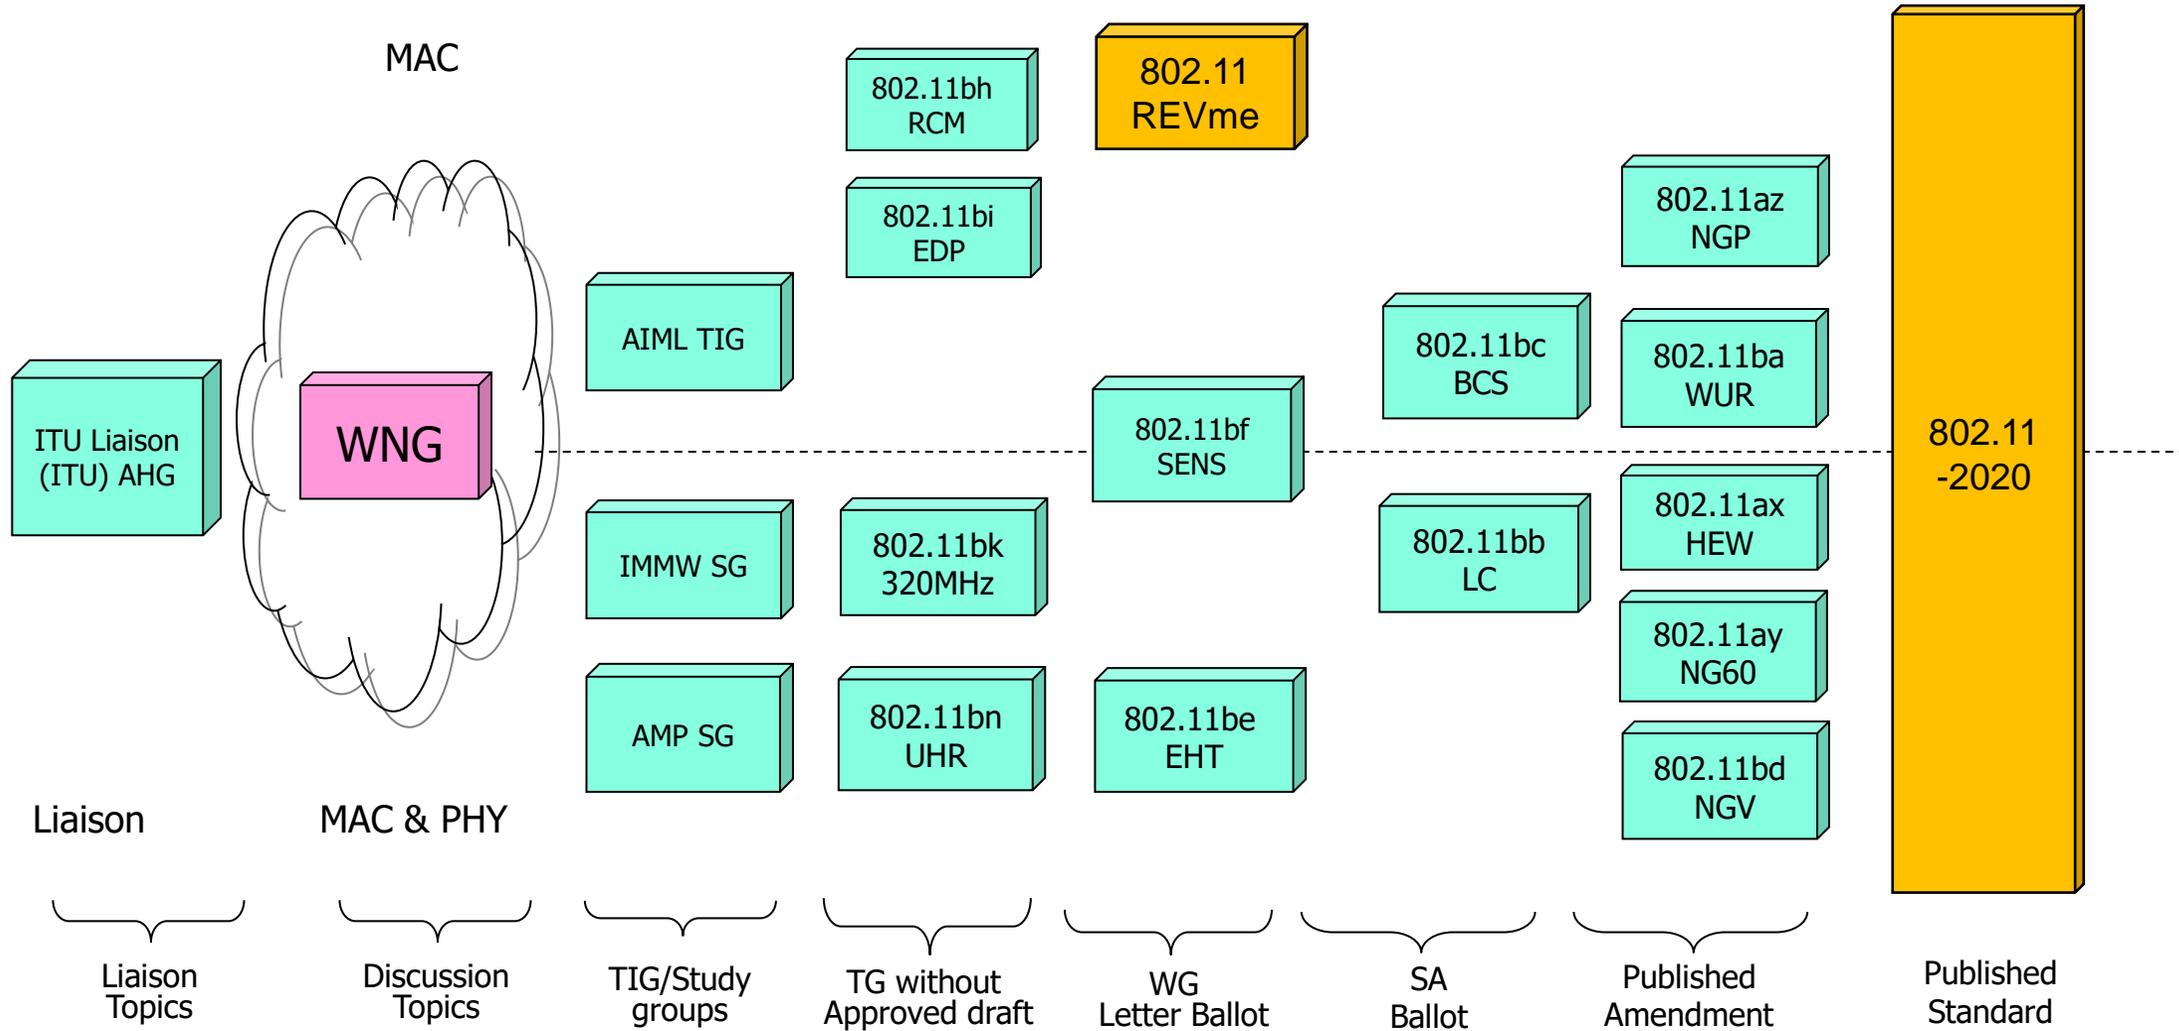

- Smart Villages in Niger connected via satellite and Wi-Fi (Smart Africa).
- Provision of fast, affordable, and reliable access to the internet over Wi-Fi in Rwanda, South Africa, Ghana, and Nigeria
- Wi-Fi reach for schools: Enabling e-learning in Mali
- Wi-Fi Community networks, <https://villagetelco.org/deployments/mankosi-south-africa/>
- AND in rural, underserved areas in developed countries

High AP-Controller connection failures in AP Group: Jeanne-Lajoie Secondaire

1

2

INSIGHTS

ROOT CAUSE ANALYSIS

System has detected high number of AP-controller connection failures. This can occur due to following reasons:

1. Intermittent or permanent loss of connectivity between AP and controller. Losing consecutive heartbeat/keepalive messages from the AP will result in AP-controller connection failures.
2. Improperly configured Firewall or NAT device or a network switch can cause the AP-controller communication failure.
3. Lack of reachability from AP to controller over a WAN connection or cloud would cause APs to disconnect from controller.
4. In rare cases, AP certificate is invalid which forces controller to deny the incoming connection from the AP.

RECOMMENDED ACTION

To remediate the problems identified above, follow the corresponding recommended actions:

1. Test network connection between AP and controller.
2. Ensure that there is clear communication on all required ports.
3. Test WAN connection health to ensure there is a route from AP to the controller and there is no or acceptable packet loss.
4. Ensure that AP certificate is valid. Work with Ruckus customer support to identify and resolve this condition.

QuadrantA

Zone RRM Health: ● Optimized

Date: Oct 10 2023 01:20

Summary: From 1559 to 264 interfering links

[RRM comparison](#)

Recommendation Details

Original Configuration	Background scanning and 20 MHz for 2.4 GHz with static AP Tx Power
Current Configuration	AI-Driven RRM for channel and bandwidth plan with static and reduced AP Tx Power in 332 APs

Zone: QuadrantA is experiencing high co-channel interference in 2.4 GHz band due to suboptimal channel planning. The channel plan, and potentially channel bandwidth and AP transmit power can be optimized by enabling AI-Driven Cloud RRM. This will help to improve the Wi-Fi end user experience.

Key Performance Indications

Before

Recommended

[More details](#)

Why this recommendation?

AI-Driven Cloud RRM will constantly monitor the network, and adjust the channel plan, bandwidth and AP transmit power when necessary to minimize co-channel interference. These changes, if any, will be indicated by the Key Performance Indicators. The number of interfering links may also fluctuate, depending on any changes in the network, configurations and/or rogue AP activities.

Potential trade-off

AI-Driven Cloud RRM will be applied at the zone level, and all configurations (including static configurations) for channel, channel bandwidth, Auto Channel Selection, Auto Cell Sizing and AP transmit power will potentially be overwritten. Do note that any unlicensed APs added to the zone after AI-Driven Cloud RRM is applied will not be considered and this may result in suboptimal channel planning in the zone.

Status Trail

Where AI-Recommendations meets AIOps

Explainable AI by RUCKUS

The screenshot displays the RUCKUS Analytics interface. The top navigation bar includes the RUCKUS logo, 'Analytics US', a search bar, and user information 'Mittal Parekh | RUCKUS NETWORKS INC | Admin'. The left sidebar lists navigation options: Dashboard, AI Analytics (highlighted), Incidents, Recommendations, Health, Config Change, Client Troubleshoot, Occupancy, Service Validation, Report, Data Studio, Data Explorer, and Admin. The main content area is titled 'Network' and shows a table of recommendations. The first recommendation is highlighted with an orange circle containing the number '1'. Below this recommendation, three sections are annotated with orange circles containing numbers '1', '2', and '3'. The '1' is on the recommendation title, '2' is on the 'What is the recommendation?' section, and '3' is on the 'Why this recommendation?' section. To the right of the recommendation details, there are 'Key Performance Indicators' showing 'Number of Interfering Links' at '2.07 k' and a 'Status Trail' showing a status change on 'Jan 12 2023 18:25'. The bottom of the table shows a second recommendation for 'Zone firmware upgrade' and a pagination control showing '1 of 2' items.

Priority	Date	Category	Summary	Scope	Type	Status	Details	Actions
High	Jan 06 2023 00:05	AI-Driven Cloud RRM	More optimal channel plan and channel bandwidth selection on 2.4 ...	East Tower Zone	Zone	New		
Medium	Jan 06 2023 00:05	Infrastructure	Zone firmware upgrade	Customer_Zone	Zone	New		

Recommendation Details

AI-Driven Cloud RRM

Current Configuration: Background scanning and Auto for 2.4 GHz

Recommended Configuration: AI-Driven Cloud RRM for channel planning and channel bandwidth selection

What is the recommendation?

Zone: East Tower Zone is experiencing high interference in 2.4 GHz band due to suboptimal channel planning. The channel plan can be optimized by enabling AI-Driven Cloud RRM. This will help to improve the Wi-Fi end user experience.

Why this recommendation?

Based on our AI Analytics, enabling AI-Driven Cloud RRM will decrease the number of interfering links from 2.07 k to 737.

What is the potential trade-off?

AI-Driven Cloud RRM will be applied at the zone level, and all configurations (including static configurations) for channel, channel bandwidth, and Auto Channel Selection mode will be overwritten. Do note that any unlicensed APs added to the zone after AI-Driven Cloud RRM is applied will not be considered and this may result in suboptimal channel planning in the zone.

RUCKUS AI Benefits

Lowest MTTI

(Mean Time to Identification)

Troubleshooting with network analytics tools

Mean time to identify

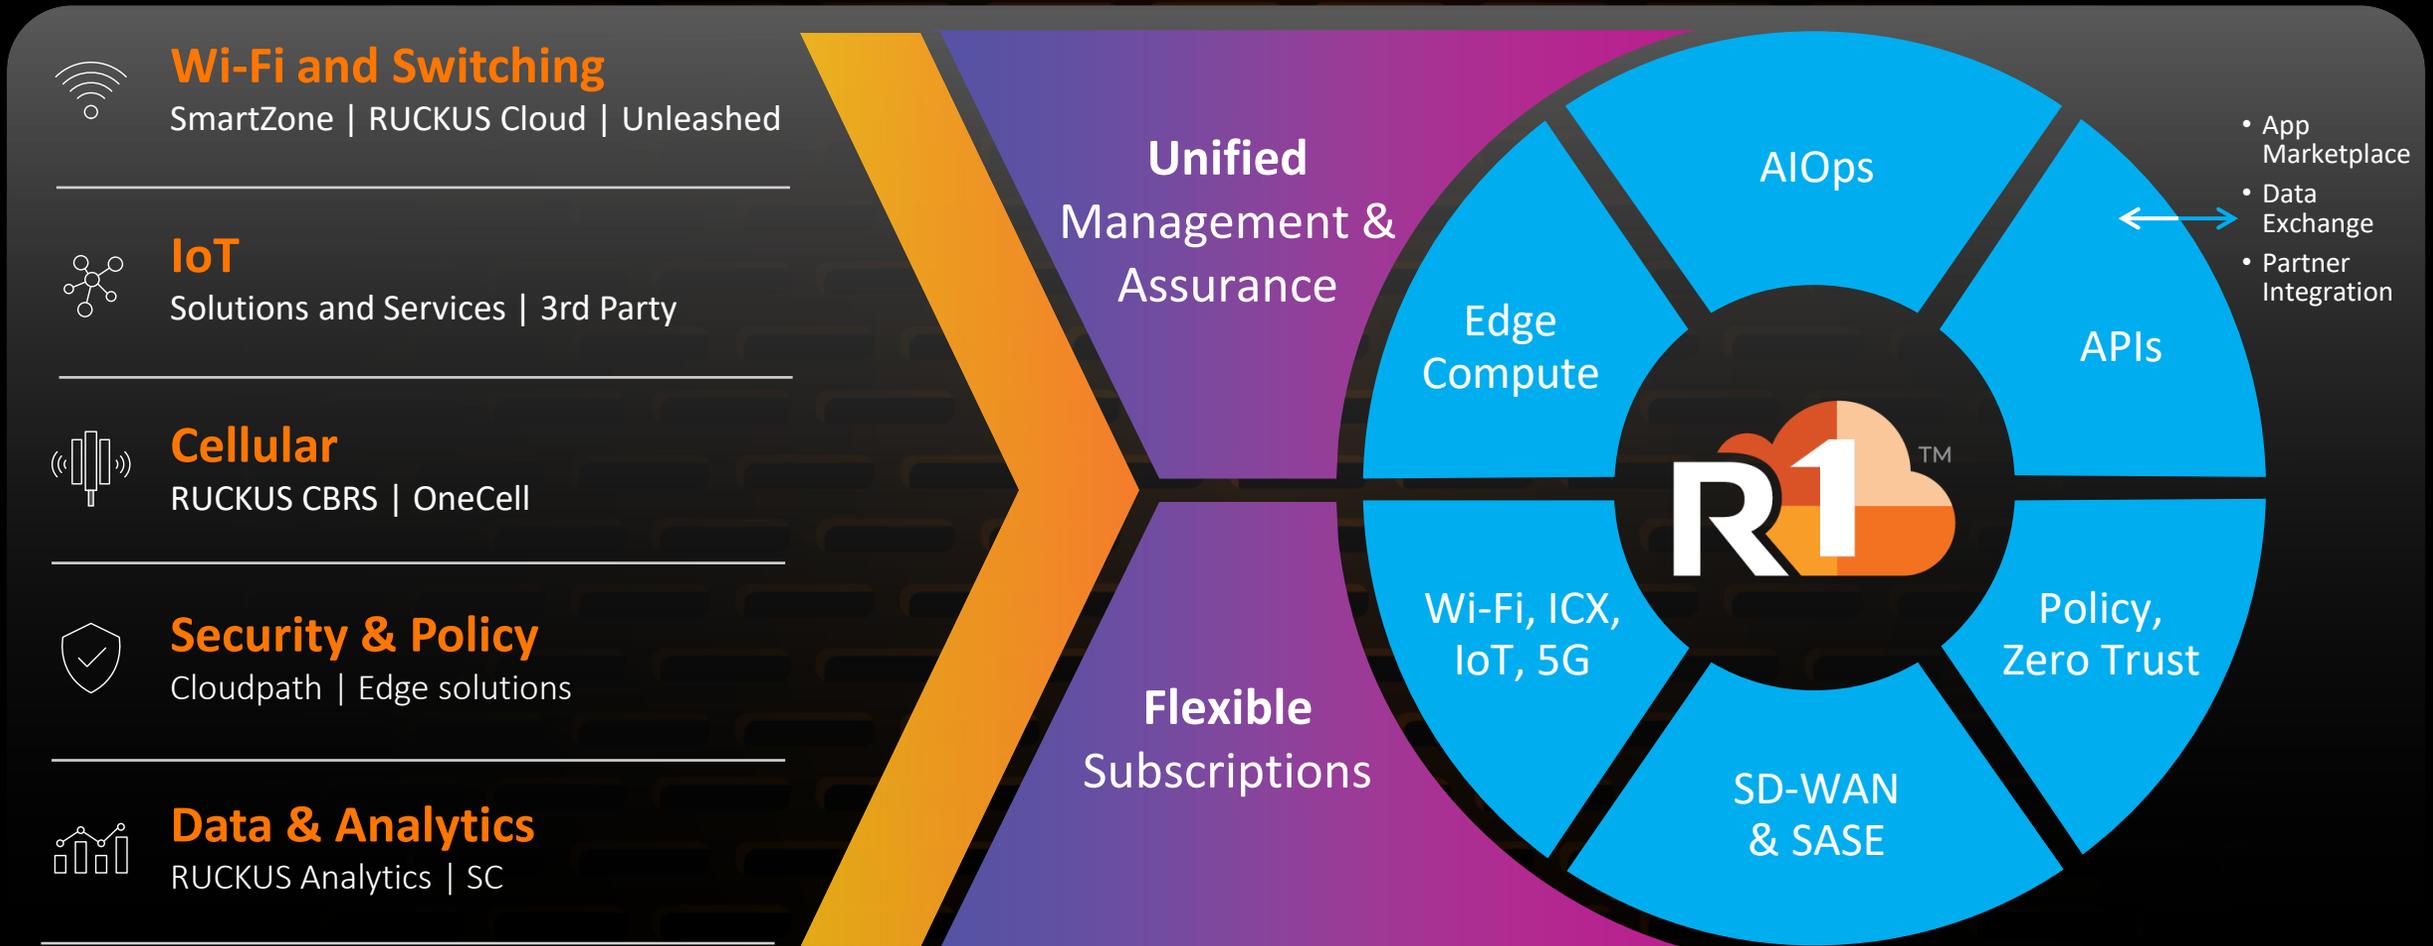

Mean time to identify (MTTI) is the time a network administrator needs to determine the root cause of a network issue or incident. A shorter average MTTI reduces the troubleshooting burden on IT while improving user experience by allowing IT to more effectively limit incident duration and impact.

- **67%** Reduction in mean time to resolution
- **40%** Reduction in time prioritizing & triaging
- **20%** Fewer helpdesk tickets
- **60%** Savings of SME IT time
- **50%** Reduction in new IT hire training
- **80%** Reduction in customer churn

What Do You Need To Measure to be *SMART*?

- In the relevant places
 - Real Measurement
 - In relevant time

- With Accuracy
- Not Samples or Estimates

What's Relevant to be *SMART*?

- How Dynamic** > Rapidly changing conditions require continuous measurement
Wi-Fi sees every device with high frequency.
- How Broad** > What kind of sensor coverage do I need?
Wi-Fi is deployed and deployable everywhere.
- How Accurate** > How important is data accuracy to achieving the result?
Not all Wi-Fi is created equal, but it can be transformed.
- How Quickly** > Need a real-time result? 1st party data and AI the only way?
Your Wi-Fi, your network, your data... Quickly.
- How Economical** > Can I generate myself or do I need to buy it? Cost / benefit?
You're deploying Wi-Fi anyways. Recognize the full value.

What To Watch

IEEE 802.11az – Micro-location positioning (decimeter level accuracy).
802.11 family. No overlay networks, same skill-set, common infrastructure.

IEEE 802.11ah (HaLow) – long-range low frequency Wi-Fi ideal for industrial, commercial and consumer IoT.
Sub-1GHz managed with same tools and techniques as 2.4GHz , 5GHz and 6 GHz

IEEE 802.11ax/be in 6GHz – Standard power (outdoor), Low Power (indoor), *Very Low Power* (anywhere)
Short distance, high speed. Micro-location, AR/VR use cases. Augmented reality providing supplemental information to audiences in a more natural way.

Related WBA Initiatives...

SMART INFRASTRUCTURE IN CITIES | WGC EMAE 2023

1964, AN IDEA

Jean-Claude Decaux invented an unprecedented business model

To offer cities high-quality street furniture with free-of-charge maintenance, in exchange for exclusive advertising rights in premium locations

Present in
80 + Countries

Present in
3 573 major cities

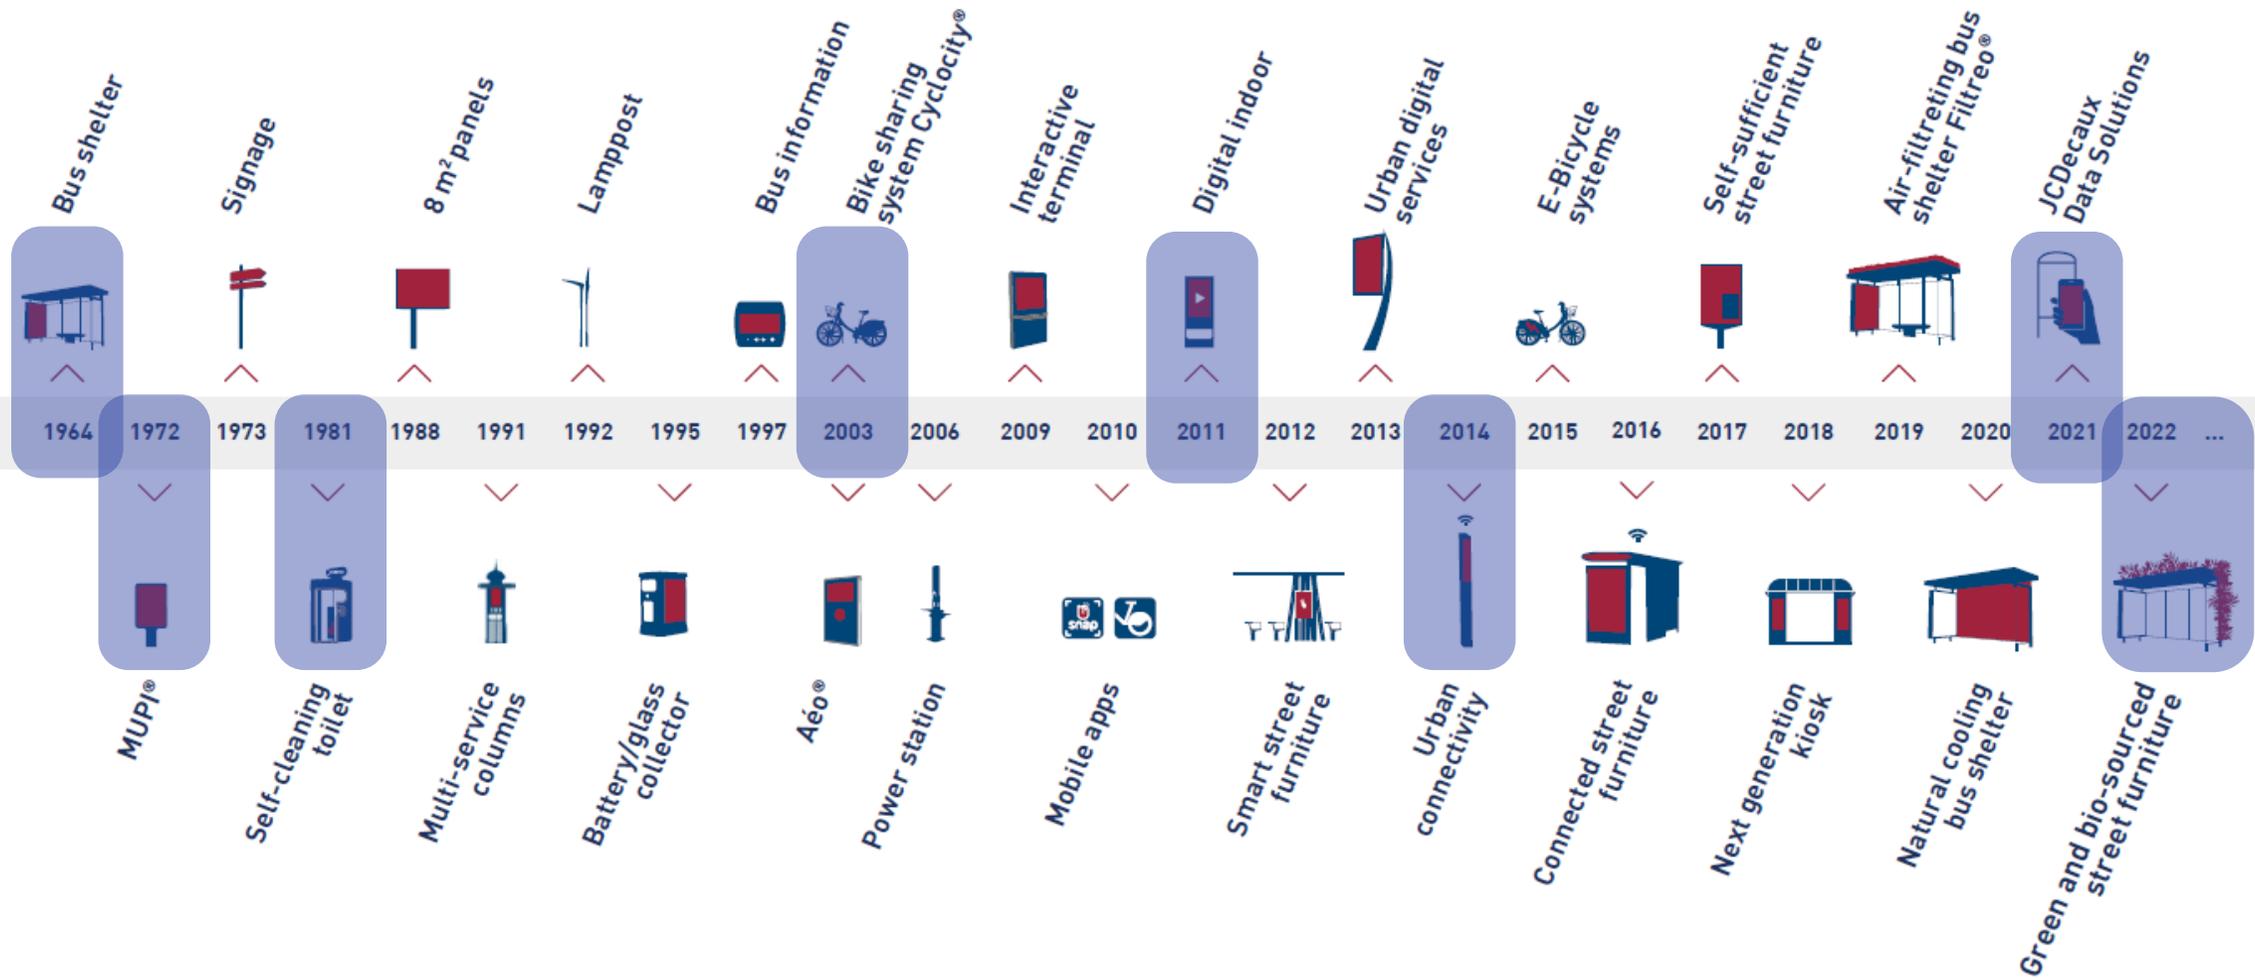

Worldwide daily audience over
850 million people

Recognized ESG commitment and
track record
MSCI AA – CDP A-

**A unique position in a
fast-changing world**

JCDecaux is the global leader in out of home communication with an inventory over 1 million assets worldwide with fast growing digital communication

Anticipating needs

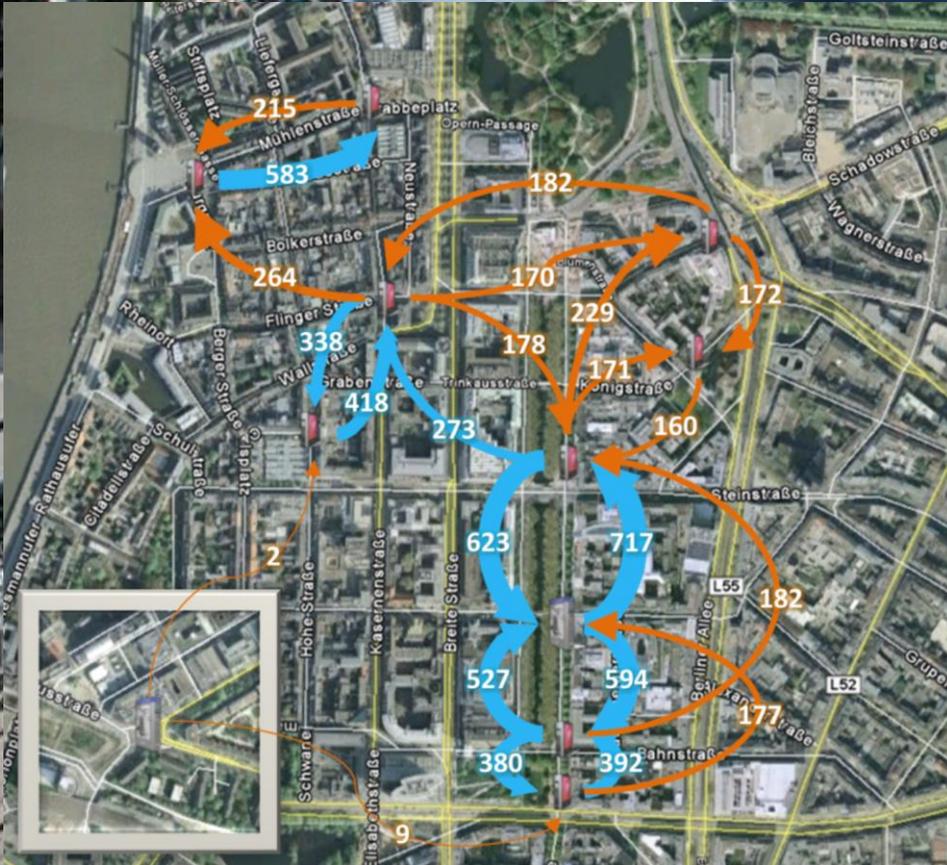

Almost 60 years of innovative services for all stakeholders

Offering connected services in Düsseldorf

Usage is location driven and site selection is key with the limited coverage of Wi-Fi hotspots and an average of 30 connexions per hotspot/day

The association with a mobile application and interactive screens extends the range of services to citizens and tourist while offering a new communication channel for the City

Data collected through Wi-Fi can feed Big Data analytics to support city planning

Improving 4G connectivity in Amsterdam

Ability to deploy 200 sites in 12 months while it would have taken 24 months to build 1 roof top macro site

Improved capacity leads to increased data usage mainly driven by video with 80% faster network and 40% more usage

Accepted by the citizens

Vendors Small Cells were not adapted for an aesthetic and multi-operators integration

Reinventing public phones in UK

400 InFocus communication hubs will be deployed in UK by end of 2023 with Wi-Fi to be added to all by end of Q1 2024

Currently Wi-Fi services are live at 124 sites and used by over 8500 people per week who connect, on average, for 4 to 5 minutes

InFocus communication hubs can provide up to 15 branded Wi-Fi networks at the same time allowing for networks to be created specifically for displayed advertising campaigns

Each communication hub also provides wireless charging for mobile devices, lifesaving defibrillators, a free to use telephone and, interactive city themed Livetouch screen with community focused apps

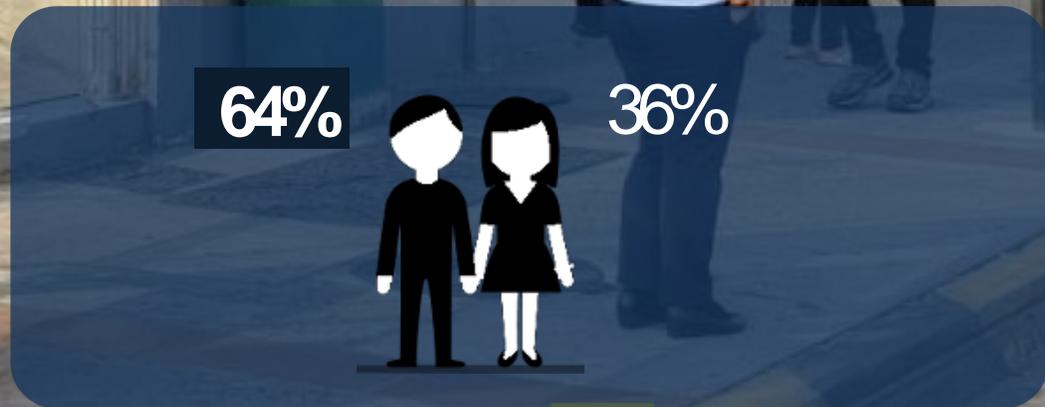

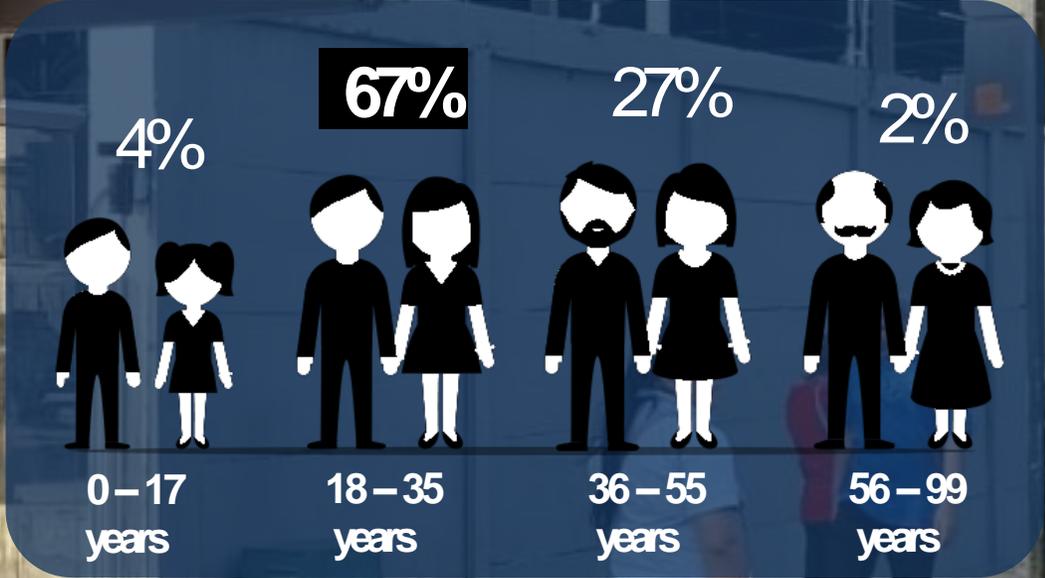

Contributing to Public internet in Guayaquil

Guayaquil has actively addressed the connectivity issue and JCDecaux contributes to this objective providing 350 access points on bus Shelters and over 1m monthly connexions

C6 / MIGUEL H. ALCIVAR

Supporting global connectivity services in Bogota

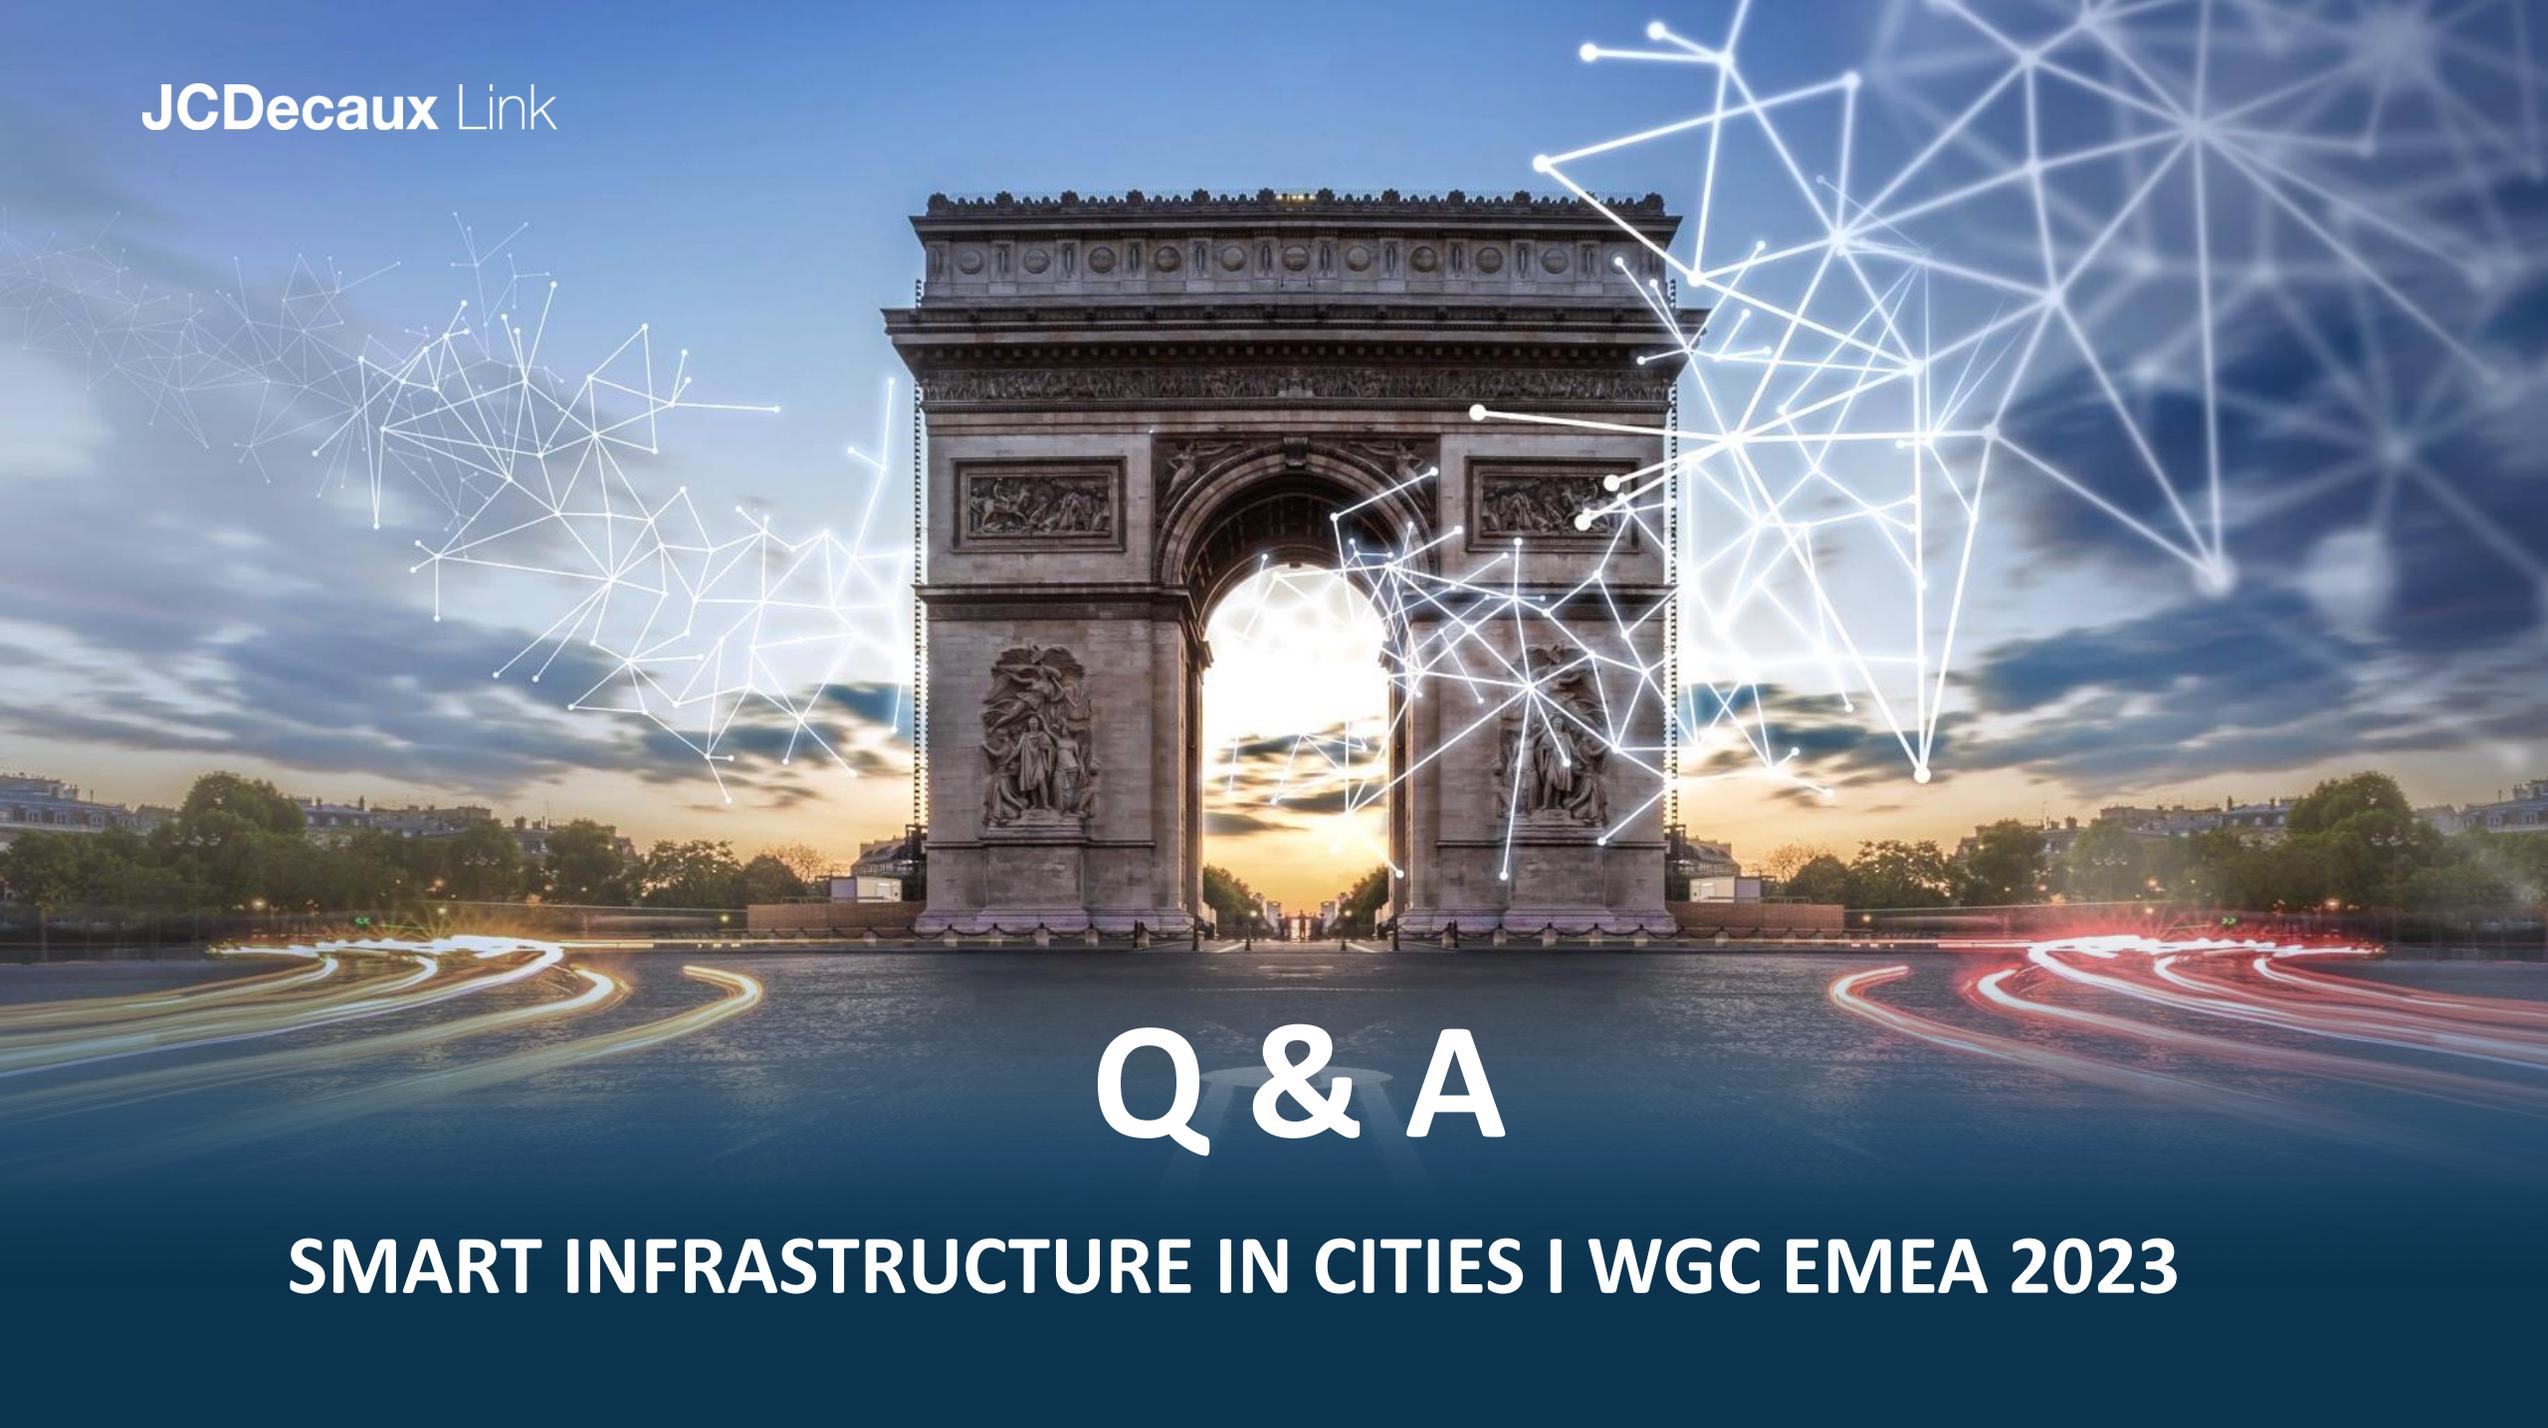

3000+ bus shelter and bus stops providing connectivity and interactive services

Fibre connectivity offering high quality Wi-Fi together with 4G/5G small cells densification opportunities

Street furniture are turning into connectivity and Smart Services hubs

Consumer Needs and Expectations for Future In-Home Connectivity

Tobin Richardson

President and CEO, Connectivity Standards Alliance

Brian Mecum

Vice President of Device Technology, Verizon

Consumer Needs & Expectations

- High Speed Internet
- Seamless Connectivity
- Smart Home Integration
- Privacy and Security

The future of home connectivity will be marked by a desire for speed, reliability, integration, and security.

Consumer Needs & Expectations

- > Remote Work and Learning
- > Healthcare and Telemedicine
- > Innovation

Consumers will increasingly expect technology to enhance their quality of life.

Wi-Fi 7 technology

7th Standard Technology with Wi-Fi

Speed up

Increase the bandwidth of 'Wi-Fi 6GHz' to '320MHz' for maximum 11.5Gbps (based on 4 antennas) and support up to 16 antennas

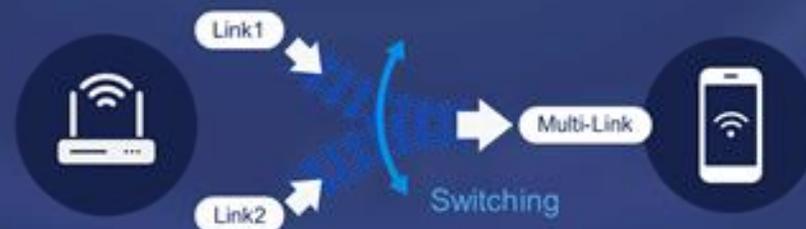

Enhanced QoS (Quality of Service)

Improve the method of critical data transmission through data-specific granular transfer priorities

Wi-Fi connection

- WiFi frequencies (2.4 GHz, 5 GHz, 6 GHz) can be used simultaneously to maximize the frequency
- Add current-reducing actions for multiple connections

Use Wi-Fi effectively

- OFDMA multi-data transmission technology increases Wi-Fi usability (Multi-RU)
- Static Preamble Puncturing technology enables Wi-Fi to be used without a Wi-Fi bottleneck in interference-intensive environments

Wi-Fi 7 Service

Increase speed and bandwidth to increase data usage and connectivity

Priority Service

GiGA WiFi Premium 7

- First carrier to support Wi-Fi 7 integration to clients
- Maximize reliable Wi-Fi performance with Wi-Fi 7 enabled device connection (currently available for laptop connections)

GiGA WiFi Premium 7

- Up to 11.5Gbps speed with 320MHz bandwidth on Wi-Fi 7
- World's leading RF and Wi-Fi technologies (6GHz frequency, QoS, OFDMA, MU-MIMO, IPTV over WLAN, etc.)
- Multiple concurrent connections (2.4 GHz, 5 GHz, 6 GHz) (Multiple connections enable Wi-Fi Full-Duplex)
- Reliable speed and QoS for Wi-Fi interference-intensive environments
- Available not only for home customers, but also for B2B and AI robots

ORIGIN™

WiFi can do  more.

We believe
that Origin will leave a legacy of making
peoples lives easier, safer, and more secure

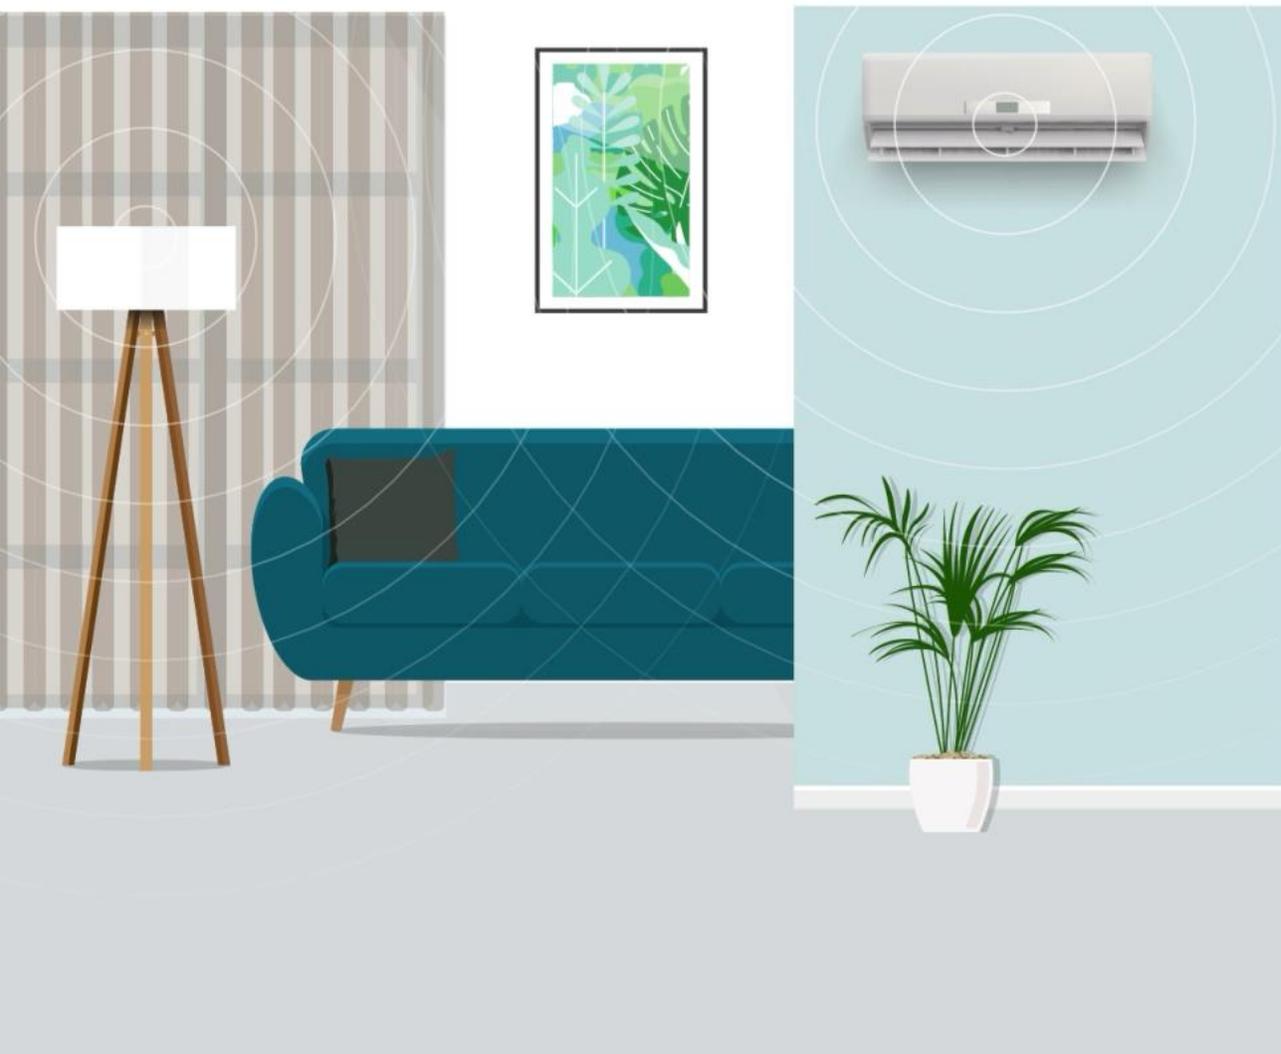

Introducing WiFi Sensing

Leveraging existing WiFi networks to sense, understand, and act

Enhancing Smart Homes and Beyond

Witness how WiFi Sensing effortlessly tailors environments

68

TruPresence™ Sensing data layer

Determines if there is a human in a space using the existing WiFi

Intrusion

- The most advanced intrusion detection solution to verify human presence in a space
- Using patented AI, we filter out non-human motion such as pets, fans, and mechanical motion for the lower false alarm rates

Occupancy

- Highly accurate human presence detection that verifies if a person is in a space, or not.
- We enable energy efficiency for HVAC, smart automations, and lighting controls in homes and businesses

How WiFi Sensing is Shaping Modern Homes

Our Goal

Create data layers to redefine the User Experience
to create Intelligent Homes. Not smart ones.

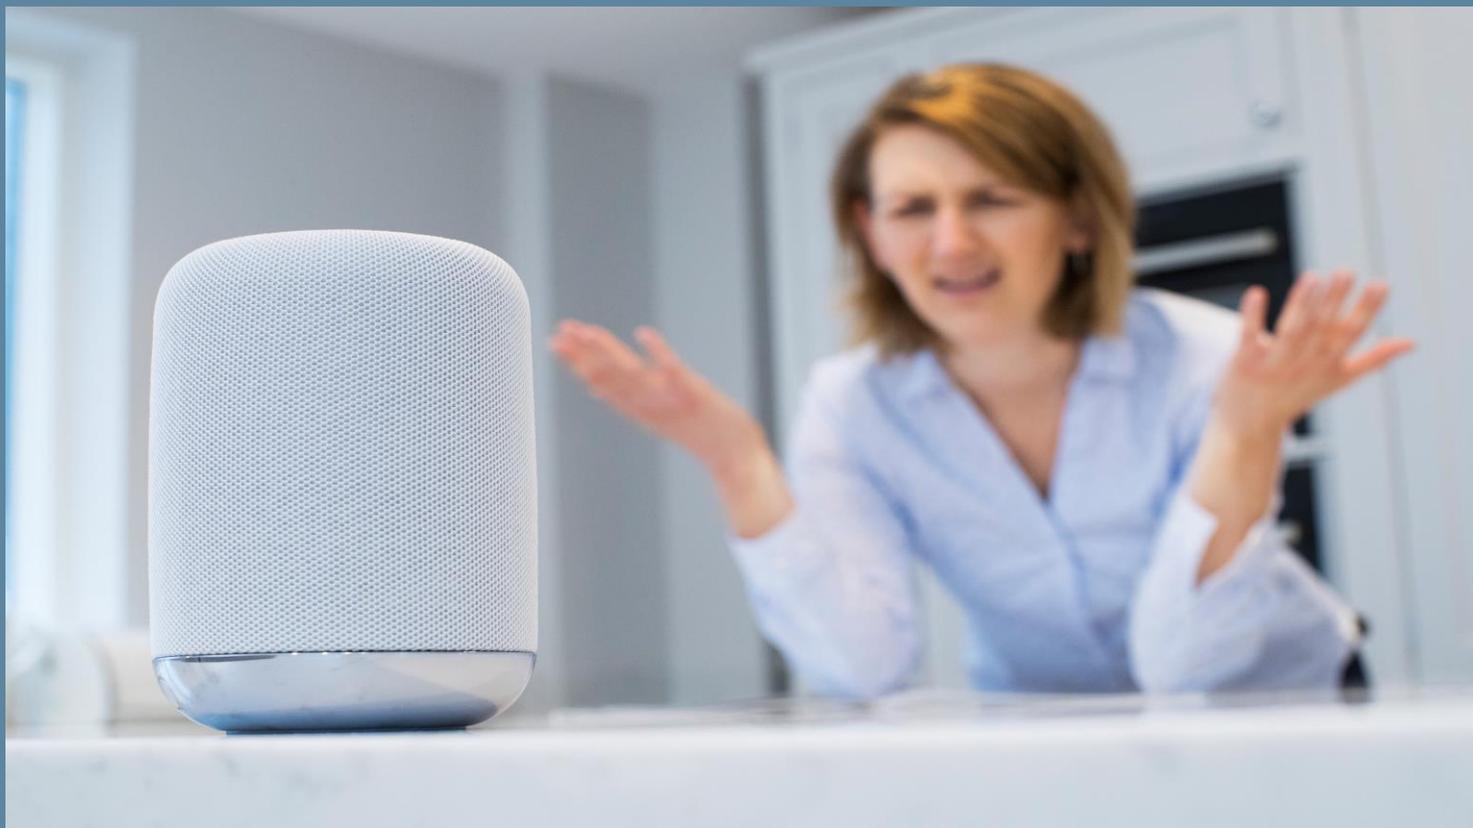

What we
were
promised

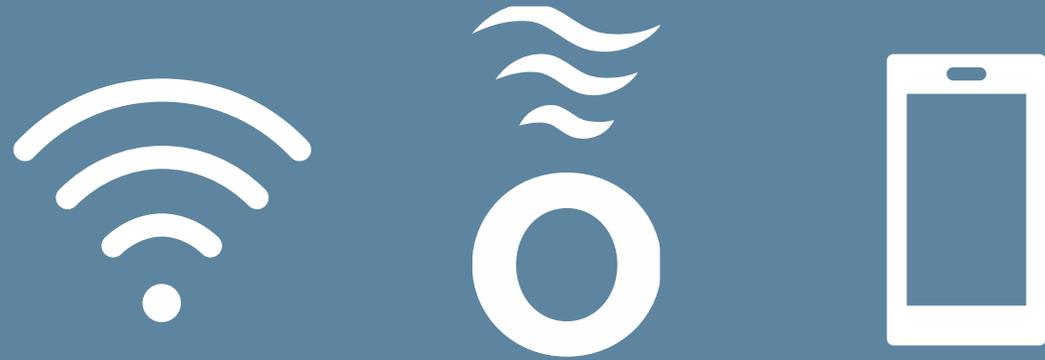

**But
instead
of this. . .**

**We got
this**

We can deliver the **promise.**

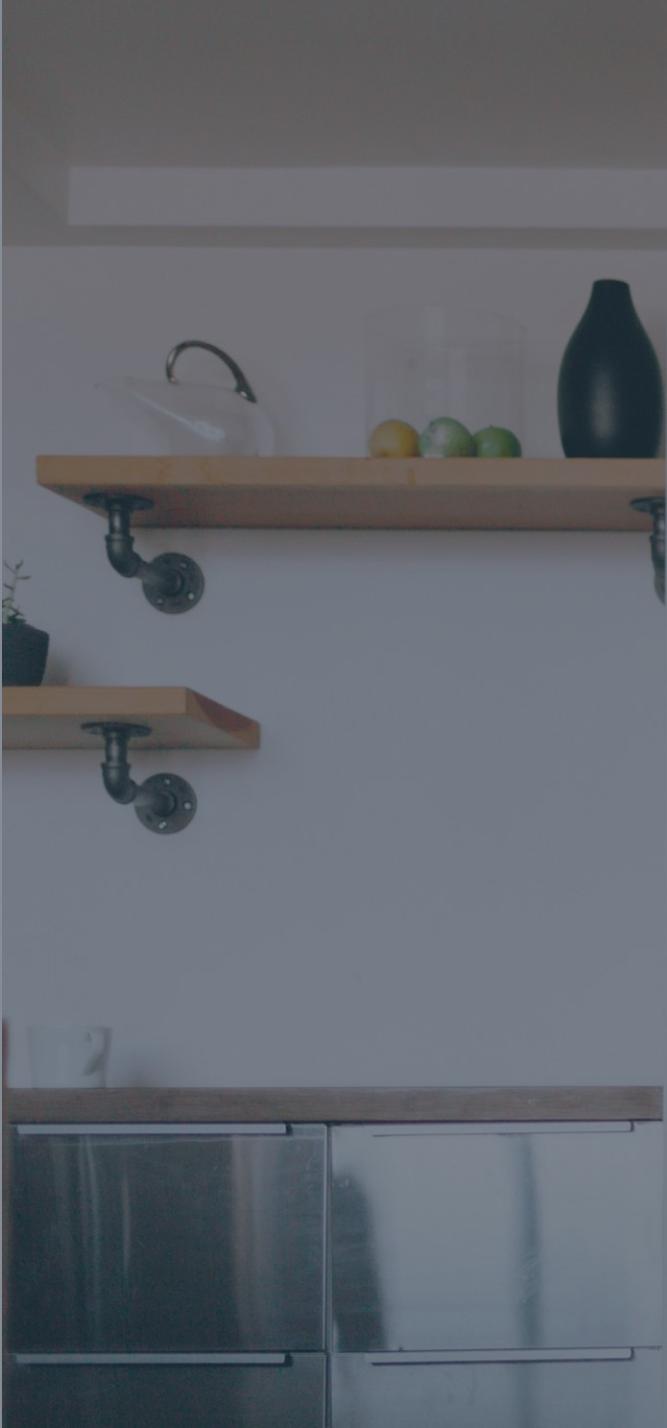

Always ready, connected,
and fast. JUST ~~BEK.~~

Sensing

A revolutionary way to
connect with your home.

"Alexa, I'm leaving."

Before you even ask... **Sensing** knows.

Sensing knows...

Sensing knows...

A young girl with brown hair is sleeping peacefully on a brown couch. She is wrapped in a thick, blue, textured blanket. Her head is resting on a patterned pillow. The scene is dimly lit, creating a calm and cozy atmosphere.

Sensing knows...

 **ORIGIN™**

A person wearing a blue patterned dress is sitting on a light-colored tiled floor. Their right hand is resting on the floor, and their left leg is extended. A pair of red slippers with white soles is on the floor nearby. The background is slightly blurred, showing what appears to be a white wall or panel with some buttons or controls.

Sensing knows...

A person wearing a grey balaclava and black gloves is peering through a window. They are holding a wooden crowbar in their left hand and a flashlight in their right hand. The background is a blurred green outdoor scene.

Sensing knows...
