Time	Presentation
9:00 AM (CET)	President & CEO Opening Remarks Tiago Rodrigues, President & CEO, Wireless Broadband Alliance.
9:05 AM (CET)	Wi-Fi® in 6 GHz: Advancing Sustainable, Global Connectivity Kevin Robinson, President & CEO, Wi-Fi Alliance.
9:25 AM (CET)	Revolutionizing Smart Buildings and Sustainable Societies with Wi-Fi and Wireless Applications Dr Ali Bagheri, Inteligg.
9:35 AM (CET)	Panel: Creating a Sustainable Future with Wi-Fi Moderator: Monica Paolini PhD, Principal, Senza Fili. Kevin Robinson, President & CEO, Wi-Fi Alliance; Dr. Angelos Mavridis, Board Advisor, Sustainability, Wireless Broadband Alliance; Christos Ioakeimidis, CEO & Co-Founder, Inteligg

10:05 AM (CET)	Wi-Fi Offload Reloaded Johan Terve, Senior Marketing Director, Enea.
10:15 AM (CET)	Operators: Optimizing Network Deployment and Management to deliver the Best Wi-Fi Experience Moderator: Pedro Mouta, Sr. Manager, PMO, Wireless Broadband Alliance. Dr. Sarper Gokturk, Head of Research, Airties; Ganesh Venkatesan, Staff Wireless Architect, Intel; Christian Gabetta, Managing Director, Heights Telecom; Phil Morgan, CTO, NC-Expert.
10:45 AM (CET)	Increasing ARPU with Wi-Fi Motion Bob El-Hawary, Executive Vice President Sales, Cognitive Systems.
11:05 AM (CET)	COFFEE & NETWORKING

Kevin Robinson

President & CEO, Wi-Fi Alliance.

**Wi-Fi® in 6 GHz:
Advancing Sustainable, Global
Connectivity**

Wi-Fi® in 6 GHz: Advancing sustainable, global connectivity

Wireless Global Congress Europe
Kevin Robinson
October 2023

Focus areas to support Wi-Fi Alliance mission

Drive next generation technology

Continuously improve quality of service for enhanced user experiences

Ensure consistency, interoperability across devices

Integrate with complementary technologies for seamless connectivity

Ensure global 6 GHz spectrum availability, harmonization

Wi-Fi Alliance multi-year mission to advance 6 GHz innovation and opportunity

Drive the broad adoption of the full 6 GHz band (5925-7125 MHz)

Emphasize the benefits of 6 GHz to meet aggressive connectivity goals

Sustainably advance global connectivity initiatives

Driving broad adoption of the entire 6 GHz band: why it matters

Without full access:

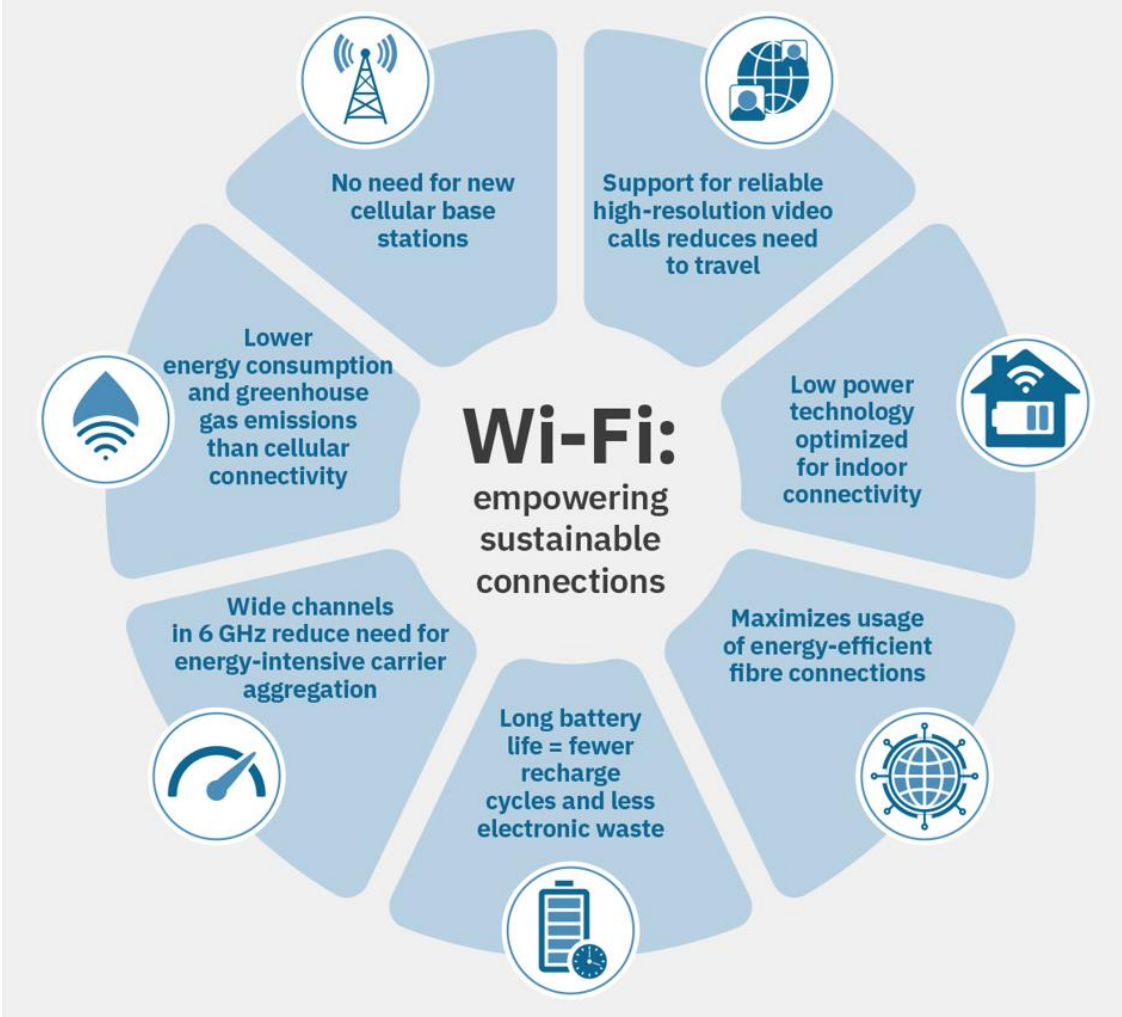

- Users left behind
- Degraded connectivity experience

Equal access promotes fair connectivity access for all

Wi-Fi necessary to deliver benefits of multi-gigabit backhaul investments

Wi-Fi sustainably advances global connectivity

**6 GHz Wi-Fi + fiber
is the most sustainable way to
deliver connectivity needs**

Wi-Fi in entire 6 GHz band advances sustainability goals in combating climate change

Scenario 1: Assigning the entire 6 GHz band to Wi-Fi

By 2030, Europe will see:

- Total FTTH/Wi-Fi energy consumption of **9,518 million kWh/month**
- Total mobile energy consumption of **4,088 million kWh/month**
- Total connectivity energy consumption would therefore be **13,606 million kWh/month**

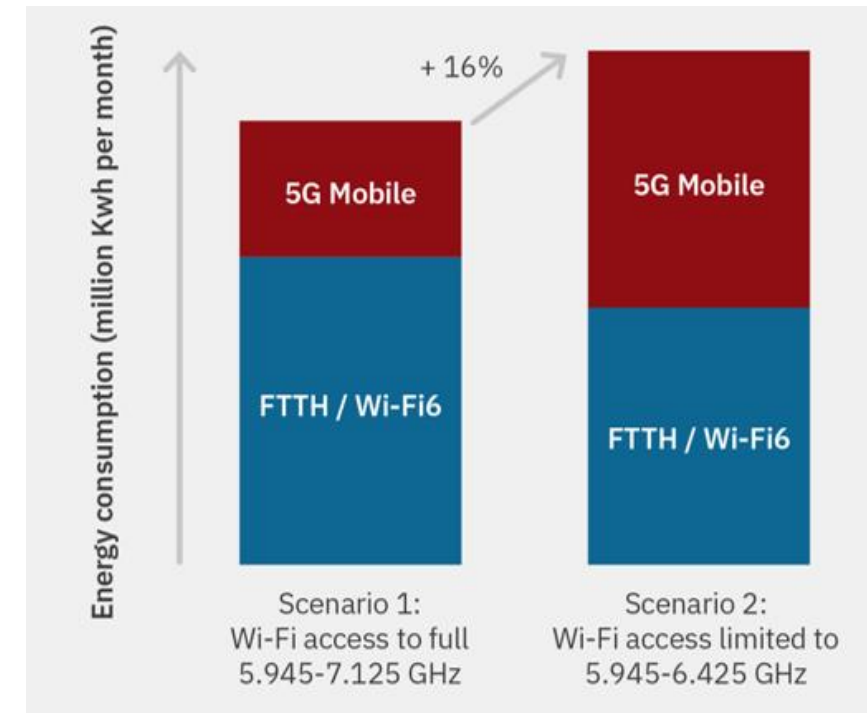

Scenario 2: Assigning the upper 6 GHz band to mobile

By 2030, Europe will see:

- Total FTTH/Wi-Fi energy consumption of **7,849 million kWh/month**
- Total mobile energy consumption of **7,988 million kWh/month**
- Total connectivity energy consumption would therefore be **15,837 million kWh/month**

Energy consumption increases without full access to 6 GHz

Thank you

Dr Ali Bagheri

Inteligg

Revolutionizing Smart Buildings and Sustainable Societies with Wi-Fi and Wireless Applications

Revolutionizing Smart Buildings and Sustainable Societies with Wi-Fi and Wireless Applications

We can revolutionize next generations' lives and habits

Wi-Fi and wireless communication revolutionized our societies

If they were cool technologies in the beginning of 2000s, now we are building our societies upon them.

One great example smart buildings and smart cities

Smart Buildings and Cities

Why smart buildings and cities
are crucial for sustainable
developments?

What makes a smart system?
Infrastructures
Decision making

Do we have required
infrastructure and technology to
go forward?

Wireless Applications in Smart Buildings and Cities

Wi-Fi network plays the role of neural system in our bodies

How our body works vs how a network works

transferring data between devices and servers, processeing, making decision, and sending command to devices

Wi-Fi Connectivity

Wi-Fi connectivity is a critical component of smart buildings.

It enables seamless communication and data transfer between various systems and devices.

With the increasing adoption of IoT devices, Wi-Fi connectivity has become more important than ever.

By providing reliable and fast Wi-Fi connectivity, we can ensure that all the devices in a building are connected and working together to achieve optimal energy efficiency.

Sustainable Societies

By adopting smart building technologies and leveraging wireless applications, we can reduce our carbon footprint and create a more sustainable future.

Smart buildings can help in:
reducing energy consumption,
improving air quality,
and promoting sustainable practices.

Conclusion

Wi-Fi and wireless applications are essential components of smart buildings and sustainable societies.

We can create more efficient, comfortable, and sustainable environments for building occupants and Wi-Fi connectivity is our strongest technology in hand for building the infrastructures for this purpose.

The future of smart buildings is exciting, and it is up to us to leverage technology and build a better world.

Thanks!

NEW LOGO – SAME WI-FI PEOPLE

Wi-Fi Offload Reloaded

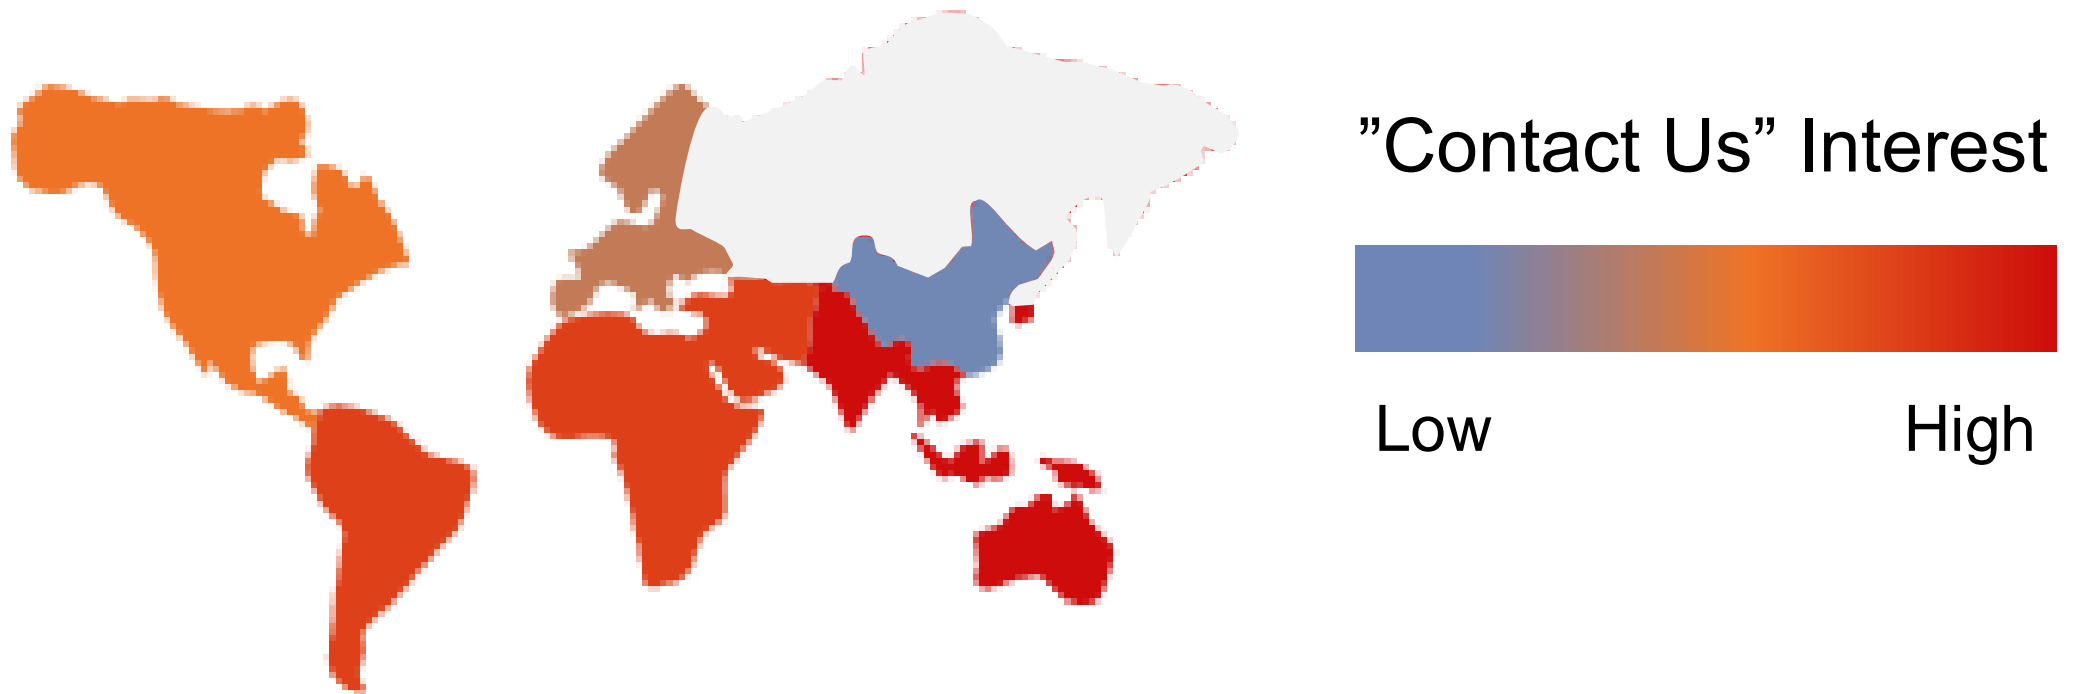

Johan Terve, Senior Director of Marketing

Wi-Fi Offload Reloaded - It Is Like 2013 All Over Again!

More interest in the last 6 months than in the last few years!

Why – What Are the Types of Mobile Operators?

Increased interest also for our **Traffic Management** solution

4G operators need more capacity driven by video

- Some are closing down their 3G networks

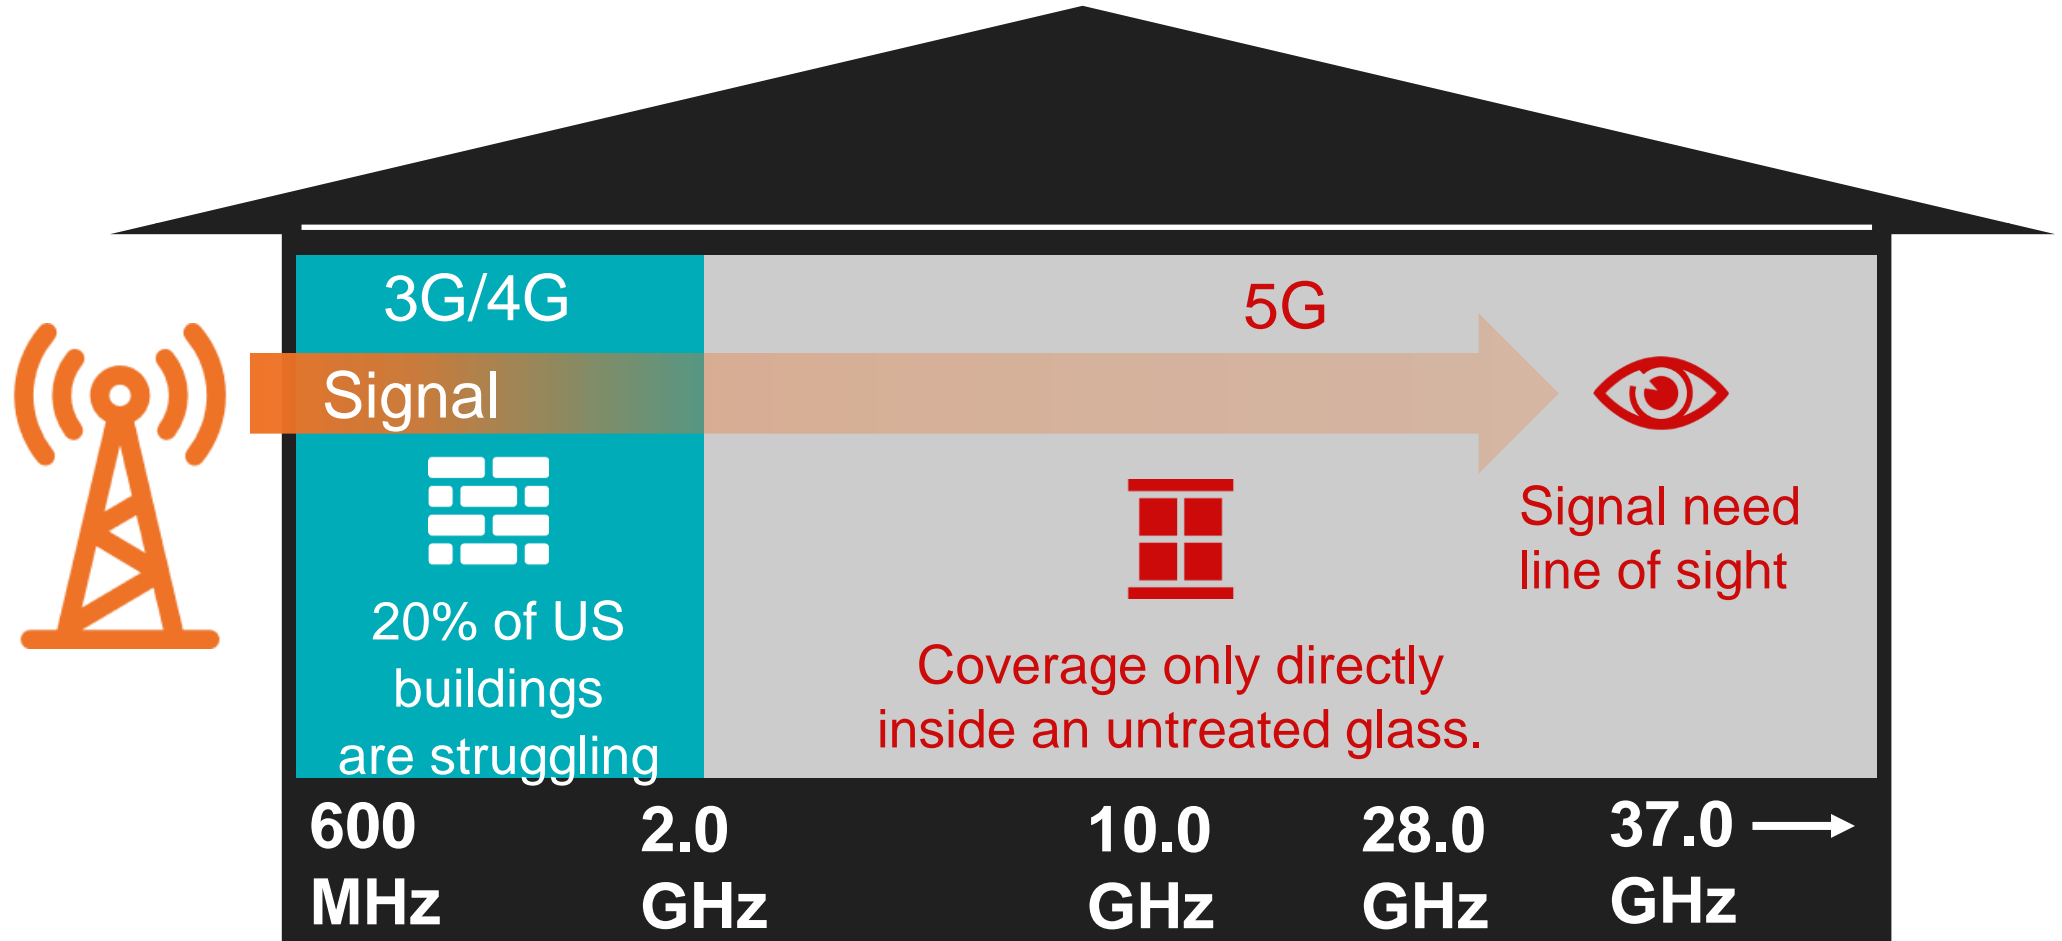

5G operators finding it difficult and expensive to obtain indoor coverage

- Many MVNOs already have Wi-Fi networks and are building their own 5G core
- We expect this trend to also come to Europe

What are the
Drivers?

Indoor Coverage and Additional Capacity

The energy crisis makes buildings even “tighter”

Cost Savings With Wi-Fi Offload

Wi-Fi has a significantly lower cost per bit than cellular

Even higher densification is needed for 5G

Indoor solutions are costly

Get paid for indoor coverage by selling B2B Wi-Fi

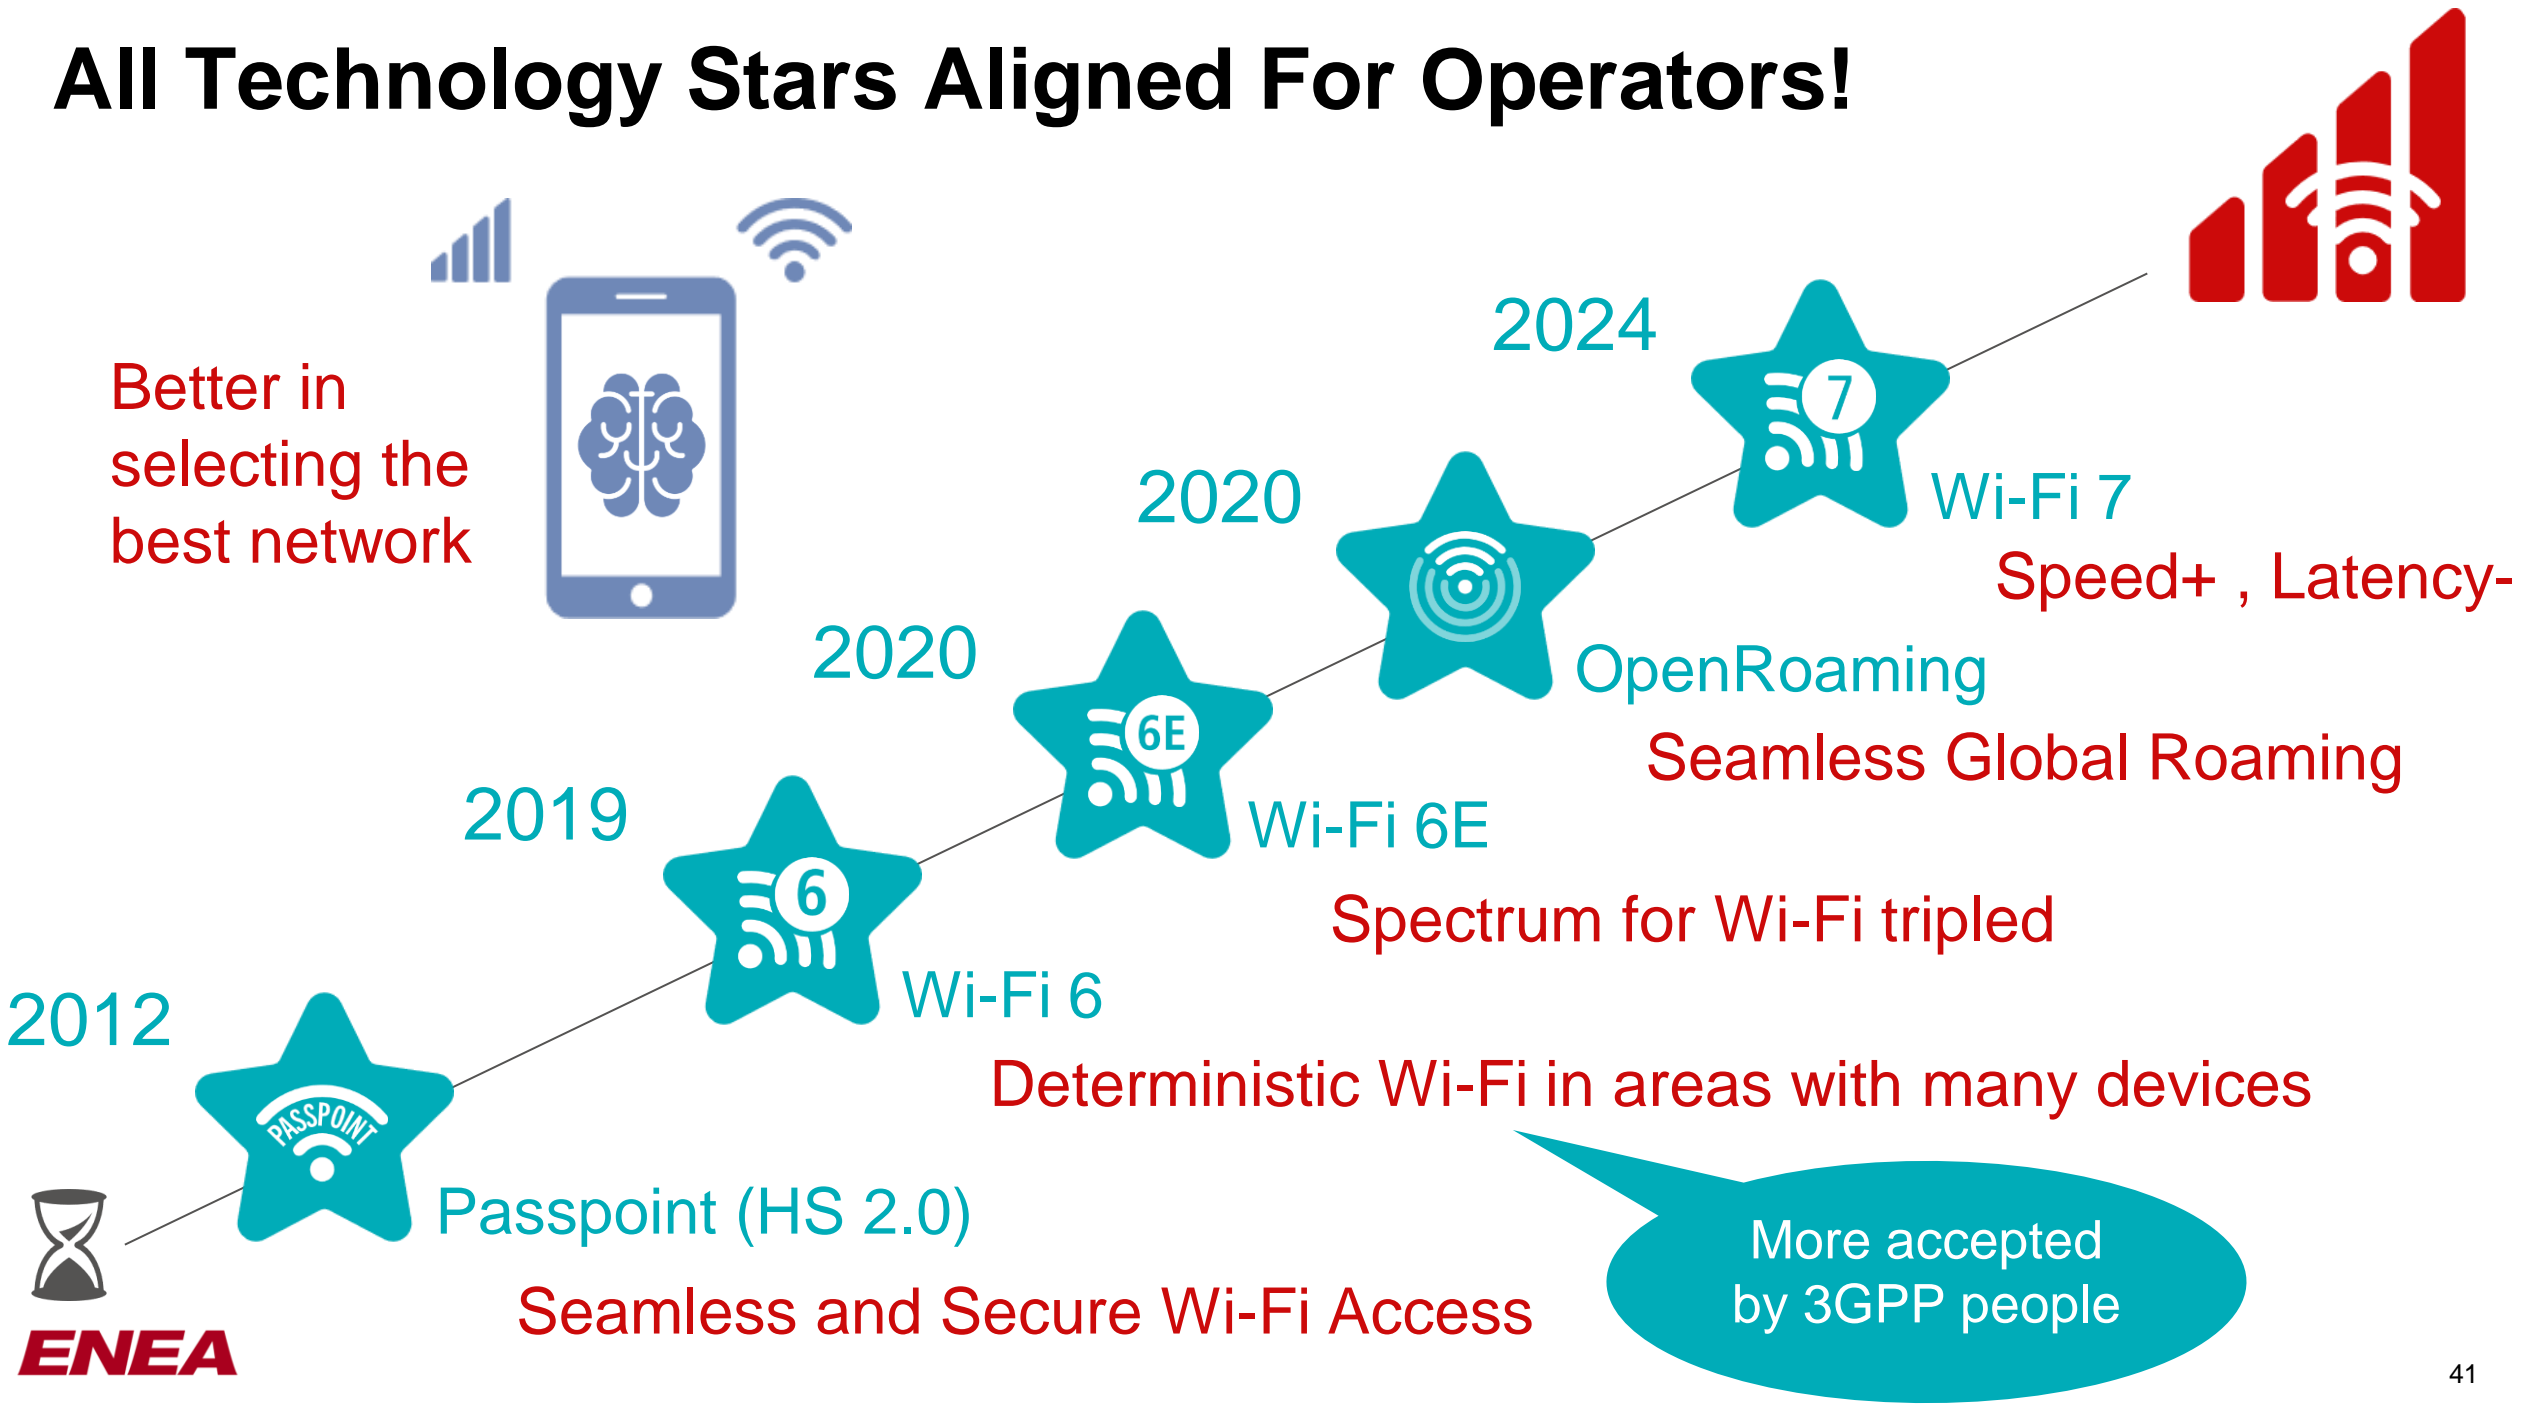

Lower energy consumption in Wi-Fi

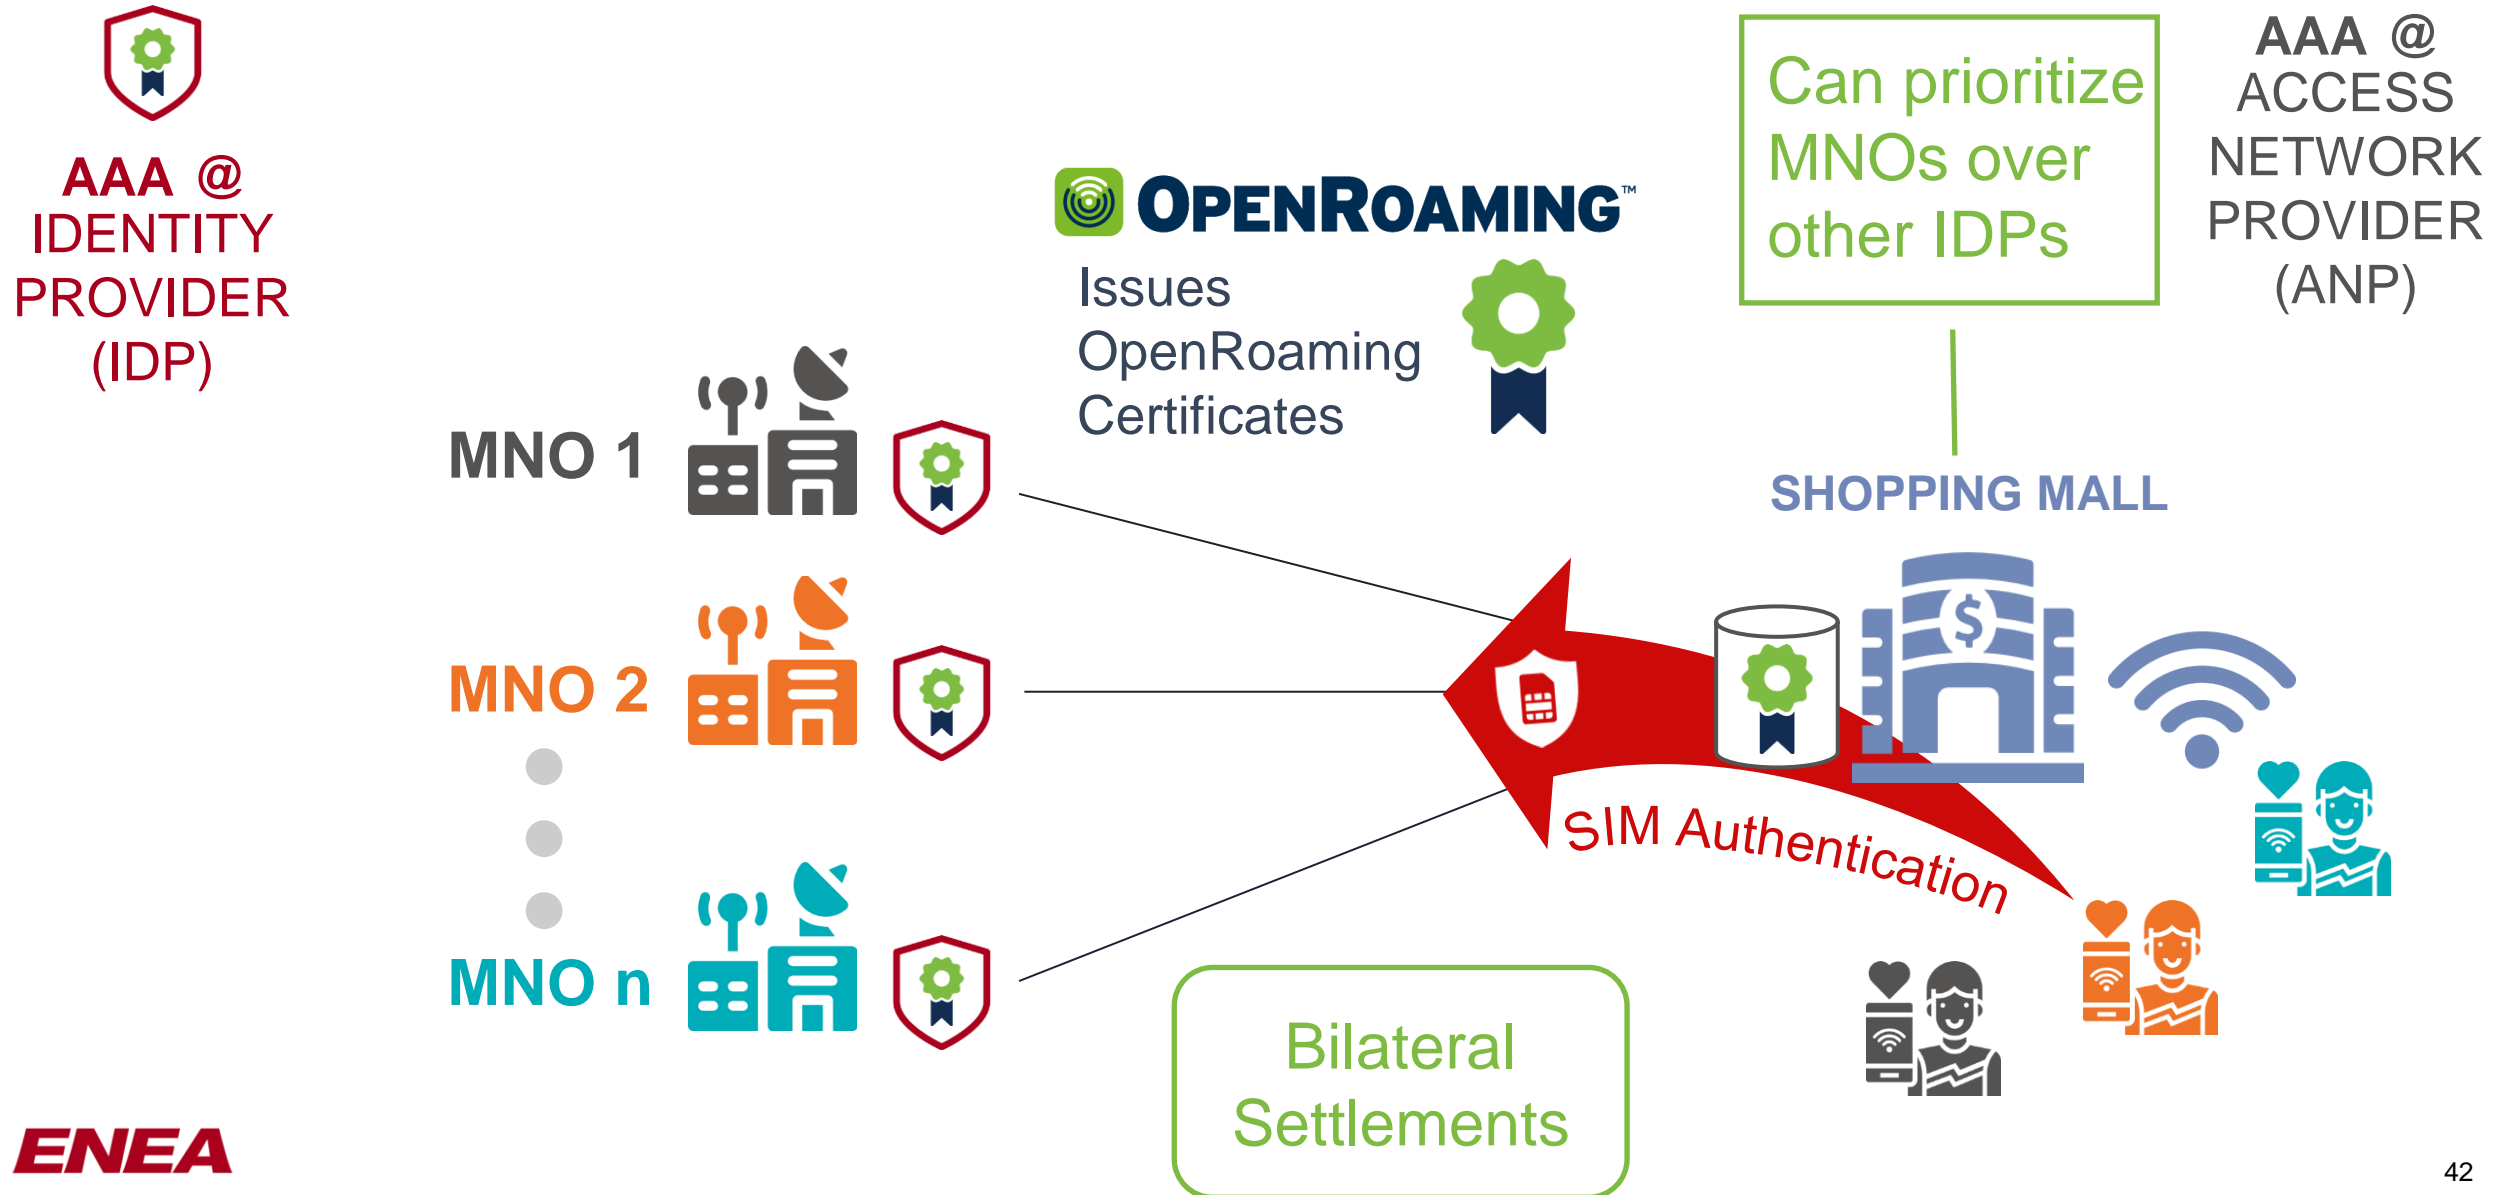

Use existing Wi-Fi

Additional SSID for Offload

All Technology Stars Aligned For Operators!

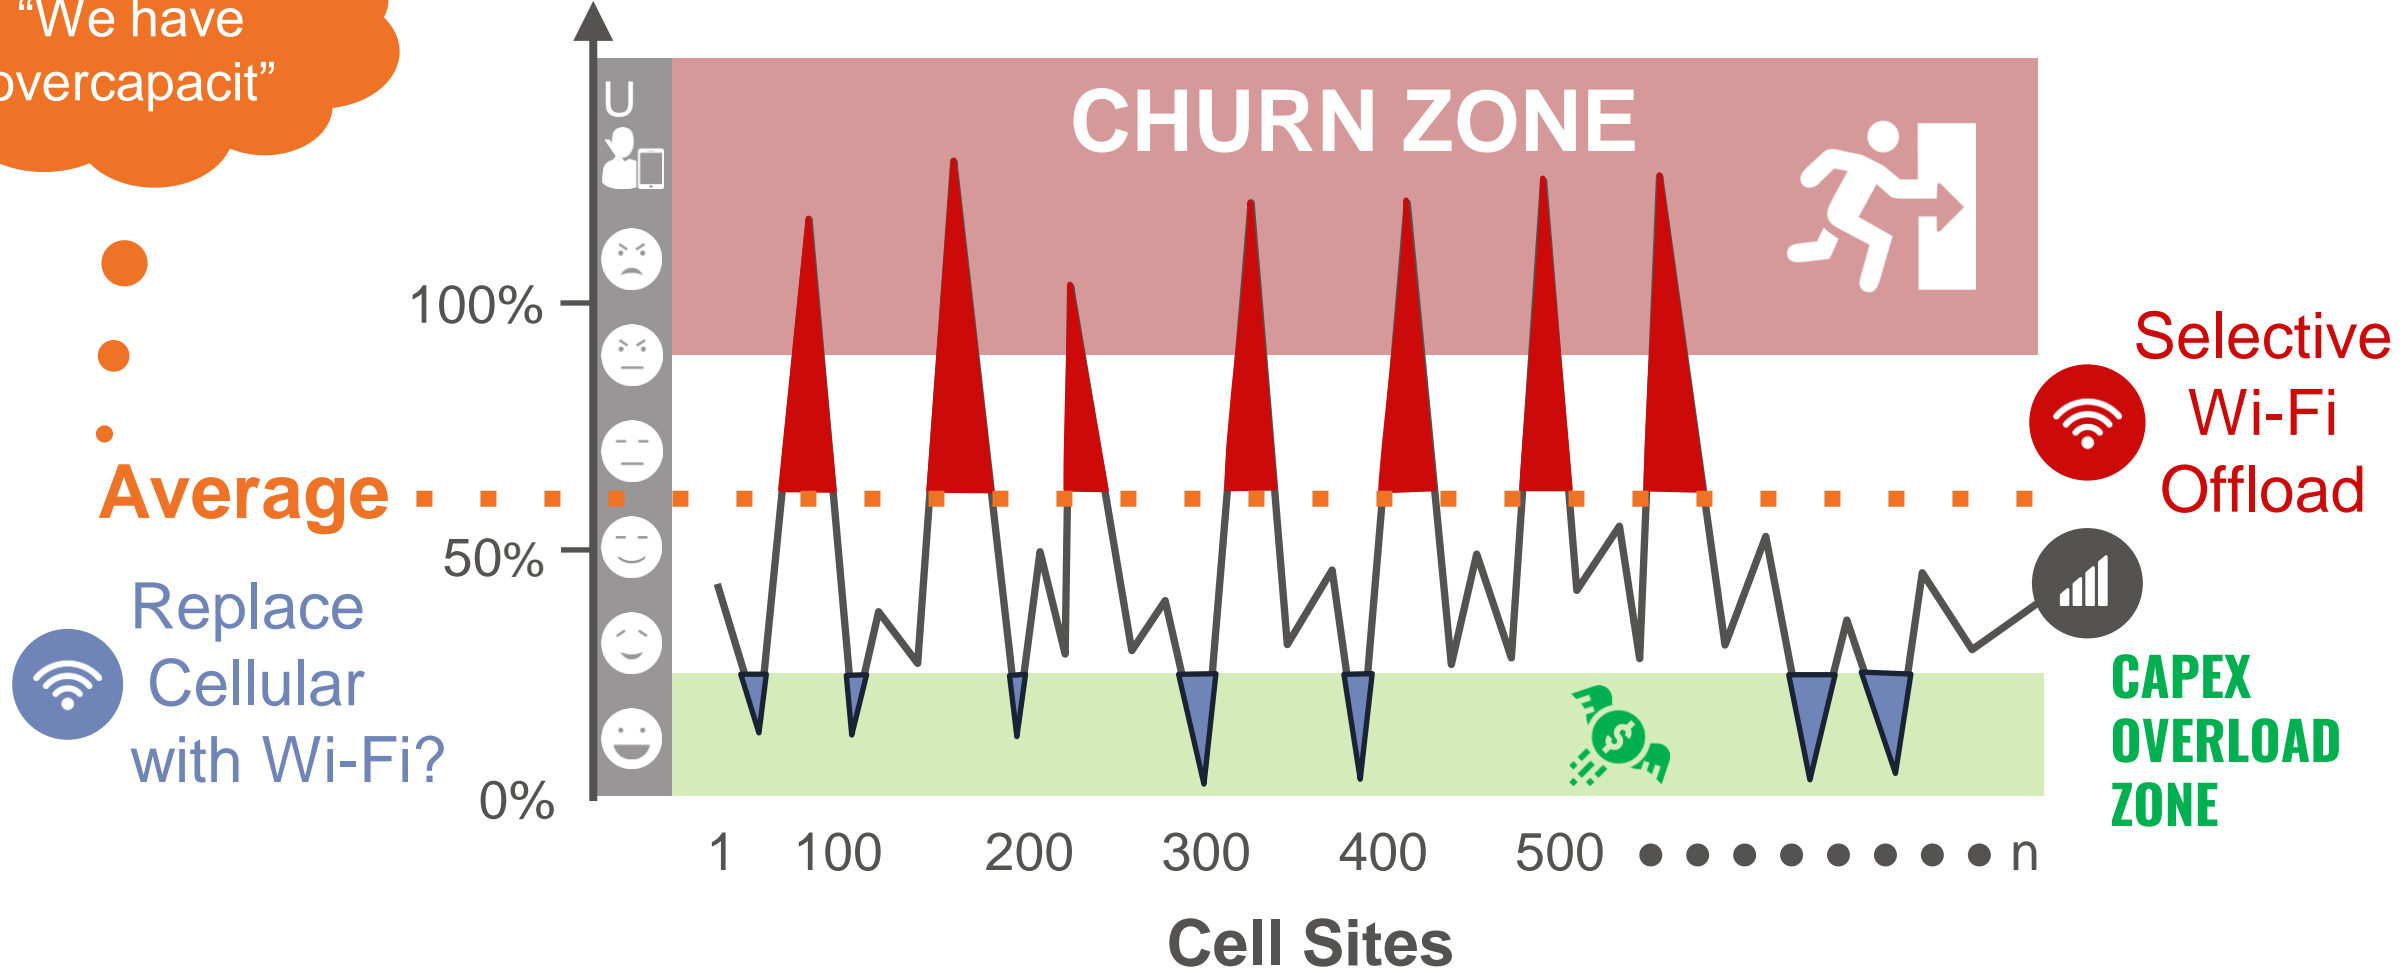

OpenRoaming the Silver Bullet for Neutral Host

Don't Let the Mobile Network People Mislead You!

"We have overcapacit"

Cell Sites Capacity Utilization

Don't be **Surprised**. Be **Ready**.

Increasing ARPU with WiFi Motion

COGNITIVE 

The Solution

WiFi Motion as a Platform

A seamless channel that empowers operators to enhance customer retention and boost revenue by offering value-added services.

Improved KPIs

Reduced churn, increased growth, and enhanced user engagement

Unlock New Revenue Streams

Creates a path to a multitude of consumer upsells and operational value added services

Cognitive's Story

Founded the Wi-Fi Sensing market by building a robust IP portfolio and forging strategic partnerships with the world's leading Wi-Fi chipset vendors.

Partnering with a network of distribution partners
2M+ deployments

Closed direct commercial deals with multiple Tier 1 ISPs
7M+ deployments

WiFi Motion Today

93%

of activated consumers continue to use WiFi Motion for the next month

Analyst Spotlight: Wi-Fi in the Enterprise

Analyst Spotlight: Wi-Fi in the Enterprise

Andrew Spivey

Senior Analyst

What do enterprises want?

- **Simplicity**
- **Unified**
- **Resilient**
- **Reliable**
- **Intelligent**
- **Secure**
- **Scalable**
- **Compliant**
- **Cost-Efficient**
- **Sustainability**

What are the challenges?

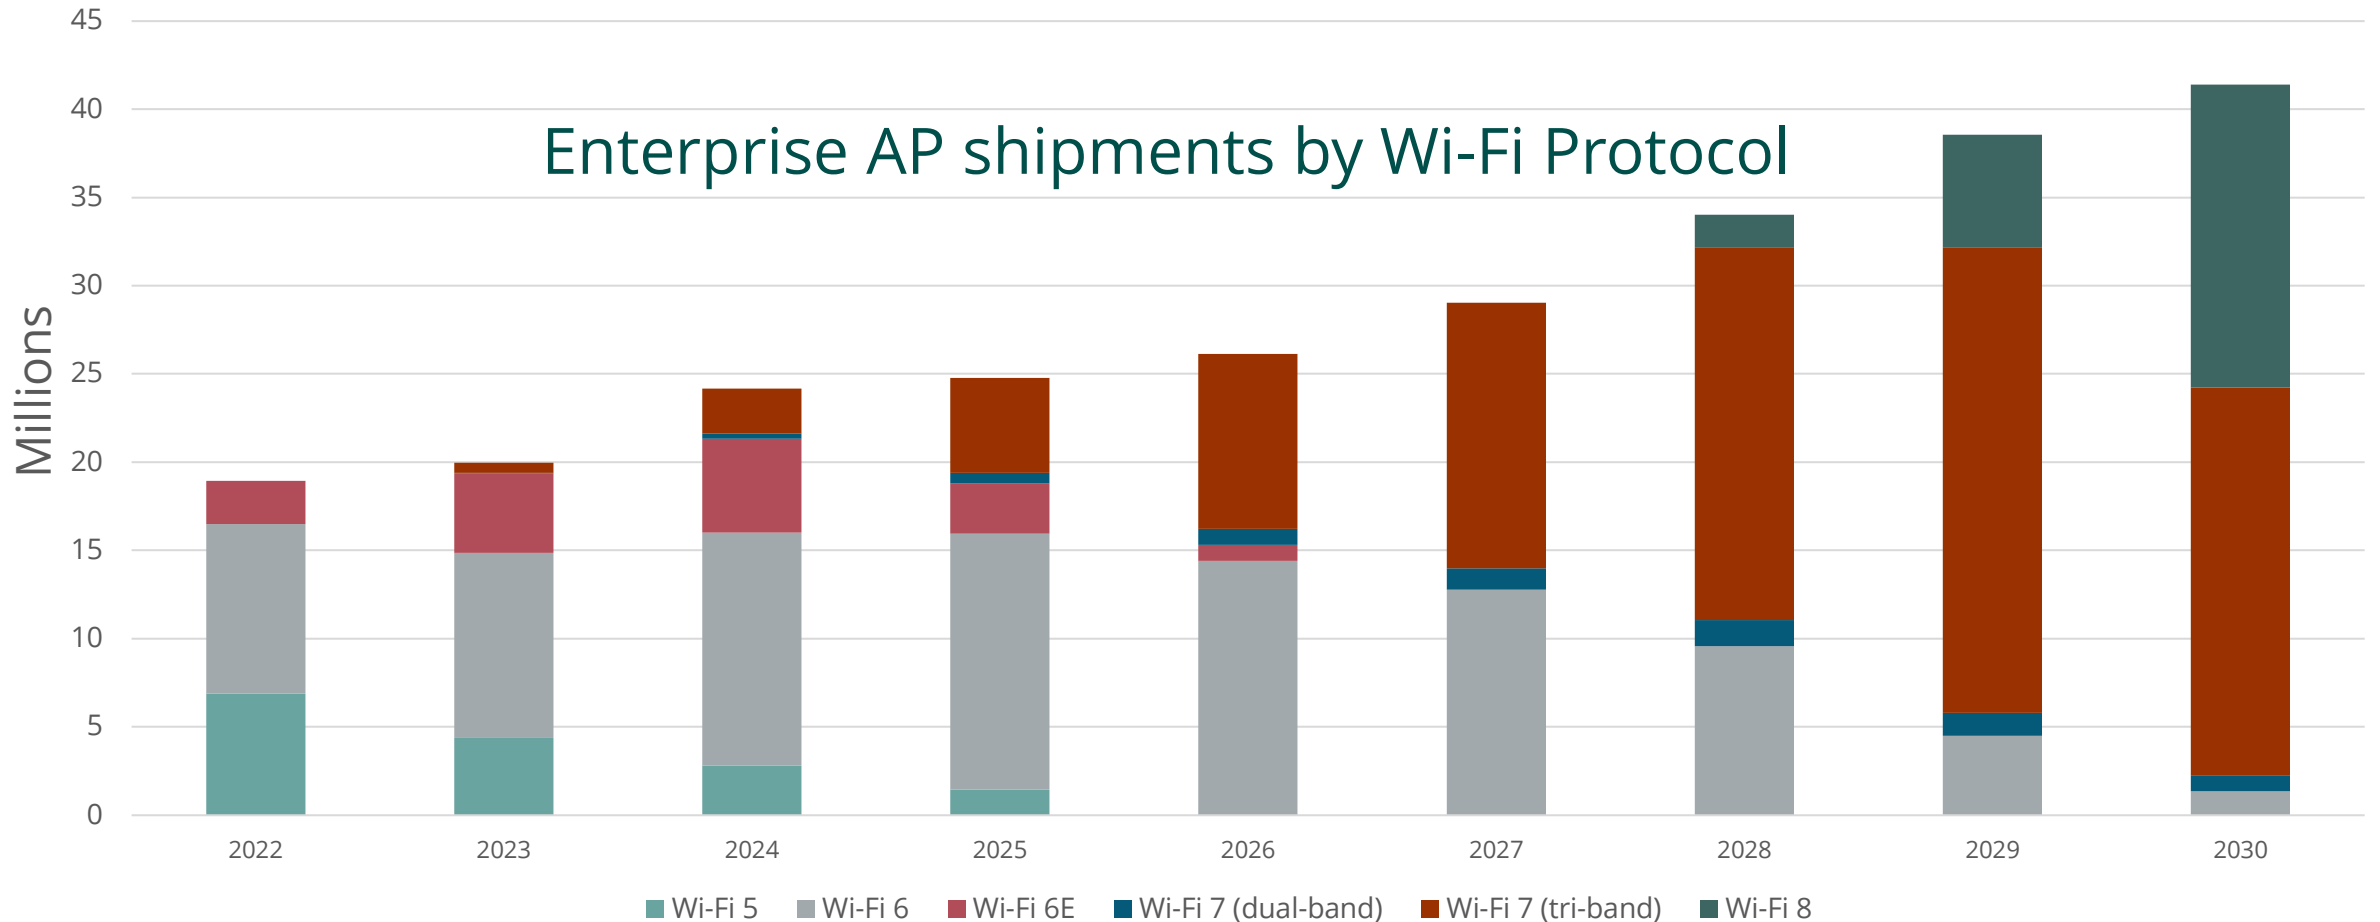

- **Overloaded Networks:** Higher density of users, increasing number and diversity of devices, growing spectrum congestion.
- **New Requirements:** Ultra-high reliability, mobility and roaming scenarios, coverage traversing indoors and outdoors.
- **Business Challenges:** Shrinking IT budgets, challenges sourcing qualified network engineers, remote access.

How are these needs being addressed?

Wi-Fi 7 Enhancements

- Wi-Fi 7 focused on delivering ‘Ultra-High Throughput’, improving reliability.
- Next year will see 2.8 million Enterprise Wi-Fi 7 AP shipments.

Other Key Trends in Enterprise

- Convergence with IoT & 5G
 - Adoption must be frictionless, with simple and unified management.
- Migration to Network-as-a-Service (NaaS)
 - Fastest transition in SMB, franchised businesses, education and hospitality.
 - Larger enterprises resistant to moving towards NaaS.
- Cloud managed architectures for seamless scaling, higher resiliency, decreased latency, and reduced CAPEX & OPEX.

AI for WLAN Networking

- AI must be developed with a focus on addressing specific business problems

Large Language Models (LLM)

Application Monitoring

Radio Resource Management

Digital Twins

Enterprise AP Shipments by Vertical

- Industrial Manufacturing has the highest growth rate, at 23.9% CAGR 2023 - 2030.
- Large public venues second highest at 14.3% CAGR 2023 - 2030.
- Education & Hospitality joint third highest, at 12.4% CAGR 2023 - 2030.

THANK YOU

Andrew Spivey

Verticals

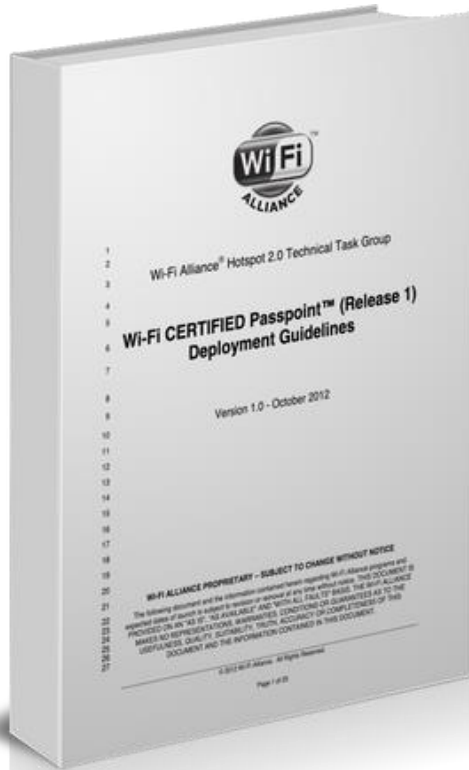

... and **Captive Portal** is....

- Manual SSID discovery and selection
- Proprietary implementation of captivating experience
- Often buggy / inconsistent UX behavior
- Limited/no auto-connectivity
- Recurring onboarding (MAC randomization)
- No “air” encryption

Passpoint (R1/2/3)

On paper, an ideal solution. But:

- Fragmented and partial support by ecosystem (networks and devices)
- Onboarding friction
- Peer-to-peer roaming agreements
- ...

➔ poor adoption and growth

OpenRoaming

- Simplifies roaming use cases implementation
- stimulates industry adoption of Passpoint, which in turn...
- pushes tech ecosystem players for a “better” technology support

Challenges

**Lack of
awareness and

OpenRoaming Delivering the Best Wi-Fi Experience

OpenRoaming

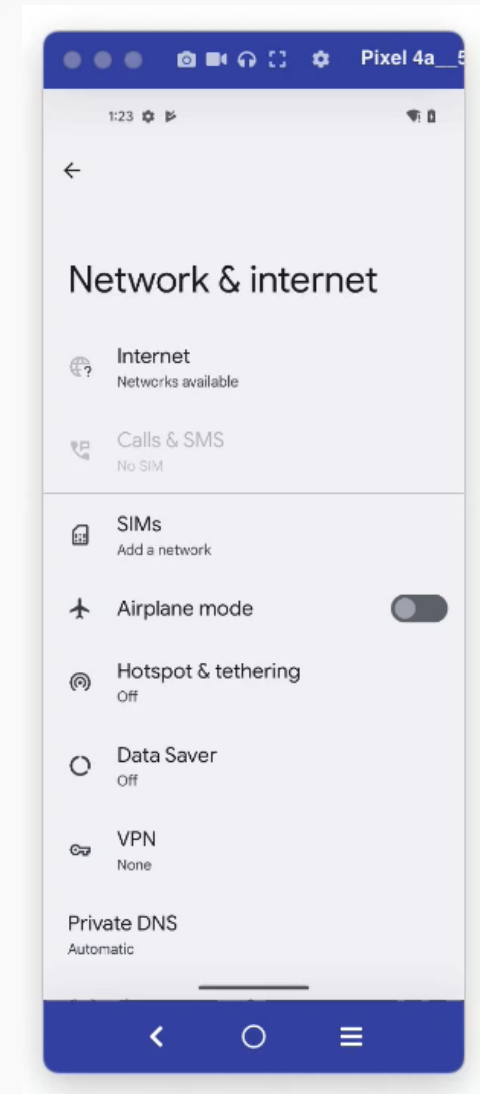

Delivering the Best Wi-Fi Experience

Mark Grayson

Cisco Fellow & OpenRoaming Chair

Avoiding the Dreaded Captive Portal

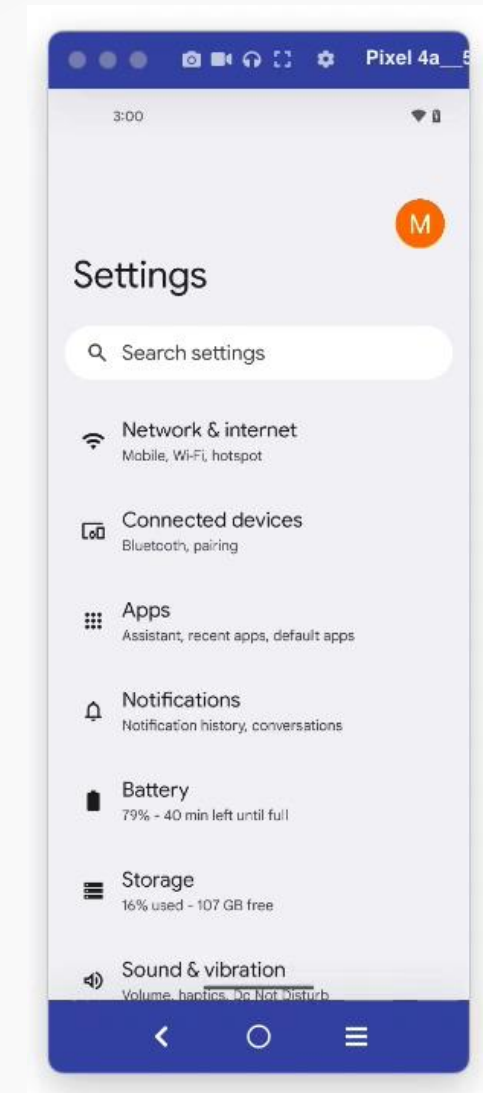

- Captive portal conversion rates continue to decrease
- Impact of frightful “Unsecured Network” notification on user behaviour
- At the mercy of device logic for Randomizing and Changing MAC addresses
- Application flows are typically black-holed until user interacts with captive portal

Delivering a Seamless and Secure OpenRoaming Experience

- Seamless integration into Samsung and Pixel firmware
 - Single user interaction to accept Ts and Cs and enable the OpenRoaming profile
 - After enabling once, all roaming is seamless
- Equivalent functionality enabled with:
 - MNO: carrier bundle based profile installation
 - App Provider: application based profile installation
 - Enterprise: MDM based profile installation

OpenRoaming Venue interaction via capport API

- OpenRoaming legal framework permits ANPs to display none captive splash pages
- Capport API enables ANP to display venue information to the user
- Lock screen indications on Android
 - Versus settings/Wi-Fi menu for iOS

OpenRoaming Application Provider Experience

- Application server can detect when user is attached to OpenRoaming network
- Can send application push notifications to the user that are displayed on the lock screen

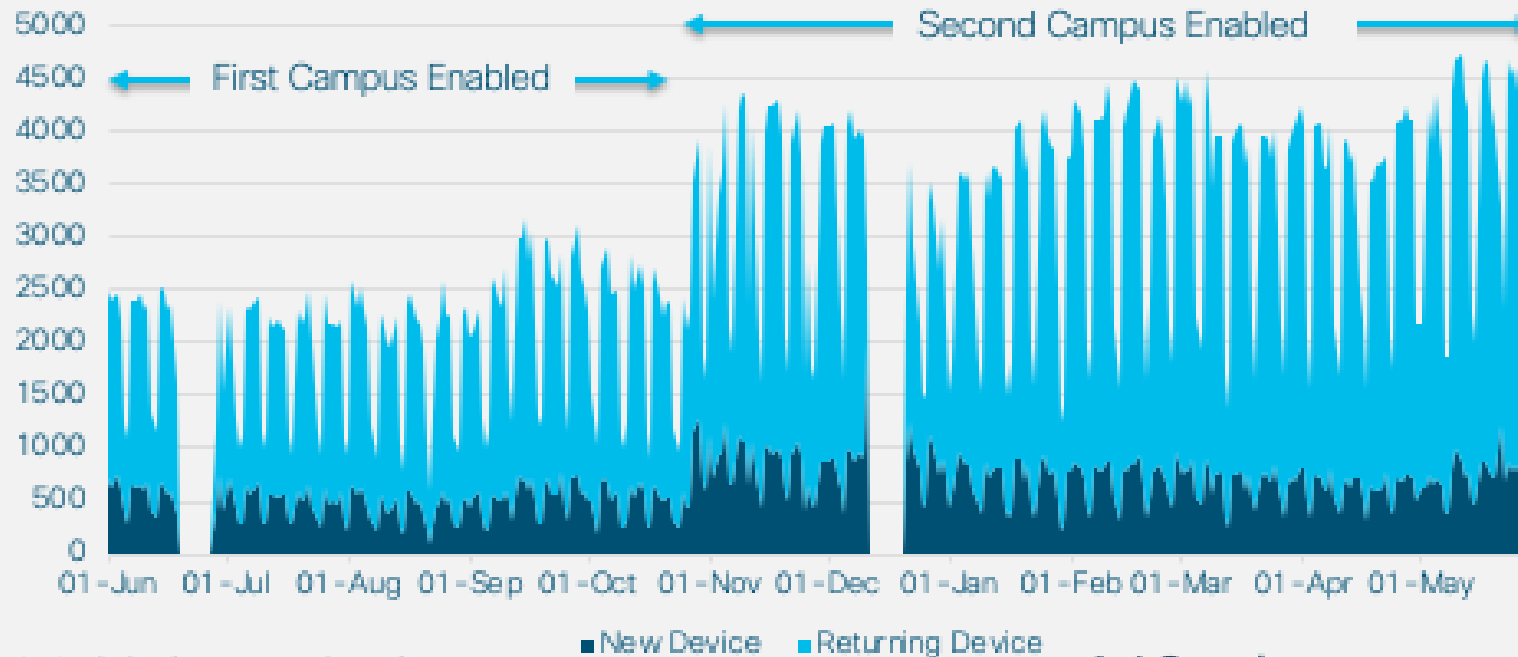

Spend €63 this month and benefit from -10% on fresh food next month with Nutri-Score A&B.
